Introduction

WELCOME
Thank you for choosing the ADDERLink® INFINITY 2100 (aka ALIF2100) high performance extenders. The ALIF2100 range offers dual-head video, audio and USB delivered over fiber and/or CATx connections. Pixel-perfect color, accurate picture quality at up to 2560x1600@60Hz and USB2.0 with fast switching.

Product in brief
- Support for dual link speeds up to 1GbE using either CATx and/or fiber. Several model variants available:
  - ALIF2102 models have a fixed 1GbE CATx port plus an SFP socket for additional CATx or fiber. They also have two DisplayPort™ video connections,
  - ALIF2122 models have two SFP sockets for CATx or fiber. They also have two DisplayPort™ video connections,
  - ALIF2124 transmitters have two SFP sockets for CATx or fiber. They also have two HDMI® video connections,
- Transmitter and receivers from the ALIF2102, ALIF2122 and ALIF2024 variants can be freely mixed as necessary with the use of appropriate SFP modules,
- Support for 1x 2560x1600@60Hz or 2x 1920x1200@60Hz,
- Digital stereo audio via the video connections,
- Uni-directional analog audio (with combined headset jack on the receiver),
- Adder’s USB True Emulation for fast switching,
- Support for advance diagnostic and troubleshooting tools,
- Backwards compatibility with existing ALIF range,
- Plug and play.

Safety
Please refer to the safety booklet provided in the box before use of this product.

Linking
ALIF2100 units can be linked in two mains ways: Direct or Networked.

Direct linking
Where ALIF2100 transmitters and receivers are directly linked to each other, very little configuration action is required, provided that they both have their factory default settings in place - just link them together. If the standard settings have been changed in a previous installation, you merely need to perform a manual factory reset on each unit.

Networked linking
Where ALIF2100 units are connected via networked links, you can either configure them individually, or configure them collectively using an AIM server:
- Configuring networked ALIF units individually - In the absence of an AIM server, unallocated ALIF2100 units have the ability to locate each other. You can alter settings via the OSD on the console connected to the RX unit by pressing CTRL + ALT + C.
- Configuring networked ALIF units collectively - The ADDERLink® INFINITY Management (AIM) server allows you to configure, control and coordinate any number of ALIF transmitters and receivers from a single application.

Note: If you are using one or more ALIF2100 transmitters within an installation managed by an AIM server, the AIM server must be running firmware version 5.3 or above.

IMPORTANT: When using AIM to configure ALIF units, it is vital that all units that you wish to locate and control are set to their factory default settings. Otherwise they will not be located by the AIM server. If necessary, perform a manual factory reset on each ALIF unit.

See Start of Life: AIM or Point to Point configuration
LOCAL FEED THROUGH
ALIF2102 and ALIF2122 receivers (RX) can be configured to support a local link to a separate host PC, via a dedicated ALIF TX, in addition to the main link to the network. The locally linked PC remains completely isolated from the main network.

To configure this arrangement, ensure that the IP port that is used for the local link is not allocated an IP address.

Note: For the local feed through feature to operate, the AIM server must be at version 4.8 or greater while the endpoints must be at version 4.0 or greater.

In operation, the user of the console at the ALIF receiver can use the following hotkey combination to toggle between the network and local links:

To change from a network link to the local link:
enter CTRL+ALT+L

To change from the local link to a network link:
enter CTRL+ALT+C
to display the OSD and choose the required connection.

Note: The L and C default hotkeys can be changed within the AIM control panel.
**TECHNICAL SPECIFICATIONS**

**Operating/storage conditions**
- **Operating temperature:** 0 to 40ºC / 32 to 104ºF
- **Storage temperature:** 0 to 40ºC / 32 to 104ºF
- **Storage and operating relative humidity:** 10 to 90% non-condensing
- **Altitude:** < 2000m

**Power**
- **External power:** 12VDC, 1.5A
- **Typical power consumption:** 7W

**Connectors**

**Local Unit - Transmitter (TX)**
- **Computer:** 1x 3.5mm socket for analog audio in, 1x USB Type B, 1x USB Type A for auxiliary connections.
  - **ALIF2102 model:** 1x 8p8c RJ45 CATx port plus 1x SFP socket for 1GbE fiber or CATx network connections, 2x DisplayPort™.
  - **ALIF2122 model:** 2x SFP socket for 1GbE fiber/CATx network connections. 2x DisplayPort™.
  - **ALIF2124 model:** 2x SFP socket for 1GbE fiber/CATx network connections. 2x DisplayPort™.

**Remote Unit - Receiver (RX)**
- **Desk:** 1x 3.5mm socket for analog audio out, 1x 3.5mm socket for headset/microphone, 4x USB Type A.
  - **ALIF2102 model:** 1x 8p8c RJ45 CATx port plus 1x SFP socket for 1GbE fiber or CATx network connections, 2x DisplayPort™.
  - **ALIF2122 model:** 2x SFP socket for 1GbE fiber/CATx network connections. 2x DisplayPort™.

**USB2.0 with class control**
Supports USB2.0 devices (low, full and high speed). Security feature allows the blocking of non-HID devices. Isochronous devices are not supported (e.g. USB audio or video devices).

**Video resolution**
The system supports up to 1x 2560x1600@60Hz or 2x 1920x1200 @60Hz

**Audio**
- Analog stereo 2-channel 16bit 48kHz (uni-directional)
- Digital stereo 2-channel 16bit 96kHz (bi-directional)

**Ethernet**
- **ALIF2102 model:** In-built support for 1GbE CATx plus support for second CATx or fiber (up to 1GbE) via SFP modules.
- **ALIF2122 model:** Support for CATx and/or fiber (up to 1GbE) connections via two SFP modules.
- **ALIF2124 model:** Support for CATx and/or fiber (up to 1GbE) connections via two SFP modules.

**Physical**
- **Local Unit - Transmitter (TX)**
  - **Dimensions:** 136mm/5.3” (w) x 150mm/5.9” (d) x 39mm/1.5” (h)
  - **Weight:** 0.8kg / 1.7 lbs
- **Remote Unit - Receiver (RX)**
  - **Dimensions:** 186mm/7.3” (w) x 150mm/5.9” (d) x 39mm/1.5” (h)
  - **Weight:** 1.1kg / 2.4 lbs

**Materials**
Aluminium and steel construction

**Approvals / Compliance**
CE, UKCA, FCC, ICES, cULus

**Product information labels**
The product information labels are located on the base of each unit.
**ALIF2102 UNIT FEATURES**
The transmitter and receiver modules are housed within durable, vented enclosures with connectors situated on the front and rear panels. The ALIF2102 units are characterized by their mix of CATx and SFP ports, plus two DisplayPort® connections.

**Transmitter - front**

- Reset switch and status indicator
- CATx and SFP link ports
- USB AUX port (for use with USB-to-serial converters)

**Transmitter - rear**

- USB
- Primary video in
- Status indicator
- Analog audio in
- Secondary video in
- Power in

**Receiver - front**

- Reset switch and status indicator
- Combined analog audio headphone/mic/headset port
- USB ports

**Receiver - rear**

- Power in
- USB ports
- CATx and SFP link ports
- Primary display
- Status indicator
- Secondary display
- Analog audio line out
ALIF2122 UNIT FEATURES
The transmitter and receiver modules are housed within durable, vented enclosures with connectors situated on the front and rear panels. The ALIF2122 units are characterized by their dual SFP ports, plus two DisplayPort® connections.

Transmitter - front

- Reset switch and status indicator
- 2x SFP link ports
- USB AUX port (for use with USB-to-serial converters)

Transmitter - rear

- USB
- Secondary video in
- Status indicator
- Power in
- Analog audio in

Receiver - front

- Reset switch and status indicator
- Combined analog audio headphone/mic/headset port
- USB ports

Receiver - rear

- Power in
- USB ports
- 2x SFP link ports
- Primary display
- Status indicator
- Secondary display
- Analog audio line out
ALIF2124 UNIT FEATURES

The transmitter modules are housed within durable, vented enclosures with connectors situated on the front and rear panels. The ALIF2124 transmitter is characterized by its dual SFP ports, plus two HDMI® connections.

*Note:* ALIF2124 transmitters do not support either the CEC or HDCP protocols.

Transmitter - front

Transmitter - rear
SUPPLIED ITEMS

ALIF2100 TX package

ALIF2100 TX unit

Power adapter with locking connector and country-specific power cord

1x Audio cable 2m (3.5mm stereo jacks)

Information wallet containing:
Four self-adhesive rubber feet
Quick start guide
Safety document

2x video cables
ALIF 2102: DisplayPort 2m
ALIF 2122: DisplayPort 2m
ALIF 2124: HDMI 1.5m

ALIF2100 RX package

ALIF2100 RX unit

Power adapter with locking connector and country-specific power cord

1x USB cable 2m (type A to B)
Part number: VSC24

1x Video cable 2m
ALIF 2102: DisplayPort 2m
ALIF 2122: DisplayPort 2m
ALIF 2124: HDMI 1.5m

Information wallet containing:
Four self-adhesive rubber feet
Quick start guide
Safety document
OPTIONAL EXTRAS

- **Audio cable 2m (3.5mm stereo jacks)**
  Part number: VSC22

- **USB cable 2m (type A to B)**
  Part number: VSC24

- **1GbE single mode fiber SFP module**
  Part number: SFP-SM-LC

- **1GbE multi mode fiber SFP module**
  Part number: SFP-MM-LC

- **1GbE single mode fiber SFP module**
  Part number: SFP-SM-LC

- **Copper SFP module for 1GbE**
  Part number: SFP-CAT5-RJ45

- **HDMI cable 1.5m**
  Part number: VSCD15

- **DisplayPort™ video cable 2m**
  Part number: VSCD18

- **Replacement power adapter with locking connector**
  Part number: PSU-IEC-12VDC-1.5A

- **Country-specific power cords**
  - CAB-IEC-AUS (Australia)
  - CAB-IEC-EURO (Central Europe)
  - CAB-IEC-UK (United Kingdom)
  - CAB-IEC-USA (United States)
  - CAB-IEC-JP (Japan)
  - CAB-IEC-CN (China)

- **19” (1U) rack-mount shelf for triple ALIF2100 transmitter units**
  Part number: RMK17

- **19” (1U) rack-mount shelf for dual ALIF2100 receiver units**
  Part number: RMK15

- **Rack mount blanking plate**
  Part number: RMK17-BP
Installation

CONNECTIONS
Installation involves linking the ALIF2100 TX unit to various ports on the host computer, while the ALIF2100 RX unit is attached to your peripherals (collectively known as the Console):

- VIDEO LINKS page 8
- AUDIO LINKS page 8
- USB LINK page 9
- POWER IN page 10
- VIDEO DISPLAY page 13
- AUDIO DEVICES page 14
- USB DEVICES page 15
- FIBRE or COPPER LINK page 11

IMPORTANT: When using an ADDERLink INFINITY Management box to configure ALIF units, it is vital that all ALIF units that you wish to locate and control are set to their factory default settings. Otherwise they will not be located by the AIM server. If necessary, perform a factory reset on each ALIF unit.

Please also see Appendix B - Tips for success when networking ALIF units.

MOUNTING
Please see Appendix F for details about mounting options for the ALIF units.

IMPORTANT: When mounting the ALIF units (and their power adapters), ensure that the vents are not obscured and that there is sufficient airflow. The operating temperature range is 0 to 40ºC (32 to 104ºF) and must not be exceeded.

Suitable for installation in Information Technology Rooms in accordance with Article 645 of the National Electrical Code and NFPA 75.

Peut être installé dans des salles de matériel de traitement de l’information conformément à l’article 645 du National Electrical Code et à la NFPA 75.
**TX video links**
The TX unit supports either a single video connection at up to 2560x1600@60Hz or two connections, each up to 1920x1200@60Hz.

*Note:* ALIF2124 transmitters do not support either the CEC or HDCP protocols.

---

**To make video links**
1. Connect your digital video link cable(s) to the DisplayPort/HDMI socket(s) on the TX unit rear panel:

   - **ALIF2102 and ALIF2122 (DisplayPort) models**
   - **ALIF2124 (HDMI) models**

---

**TX analog audio links**
The TX unit supports analog stereo audio so that you can use speakers. Digital audio is handled separately via the video connection(s). See Appendix B - Support for analog and digital audio for details.

**To make an audio link**
1. Connect an audio link cable between the 3.5mm analog audio jack on the TX unit rear panel and the speaker output socket of the host computer.

   - **Analog audio output from host computer**

   - **ALIF2102 and ALIF2122 (DisplayPort) models**
   - **ALIF2124 (HDMI) models**

---

2. Connect the plug at the other end of the cable(s) to the corresponding video output socket(s) of the host computer.
TX USB links
The TX unit has a USB type B socket on the rear panel to link with the host computer. Additionally, the unit also has a type A socket on the front panel to allow an optional USB-to-serial converter device to be attached.

To make a USB link
1. Connect the type B connector of the supplied USB cable to the USB port 1 on the TX unit rear panel.

RS232 serial support
To support RS232 serial connections, use third-party USB-to-serial adapters on both the TX and RX units.

To attach a USB-to-serial converter
1. If required, connect a USB-to-serial converter to the AUX port on the TX unit front panel.

2. Connect an accompanying USB-to-serial converter to a vacant USB socket on the RX unit.
TX power in
Each unit is supplied with a power adapter and country-specific power cord. The supplied power adapter uses a locking-type plug to help prevent accidental disconnection; please follow the instructions shown on the right when disconnecting a power adapter.

To connect the power adapter
1. Attach the output plug of the supplied power adapter to the power input socket on the right side of the rear panel. As you insert the plug, pull back slightly on the outer body to assist the locking mechanism until the plug is fully inserted.

2. Insert the IEC connector of the supplied country-specific power cord to the socket of the power adapter.

3. Connect the power cord to a nearby mains supply socket.

To disconnect the power adapter
1. Isolate the power adapter from the mains supply.
2. Grasp the outer body of the power adapter plug where it connects with the node.
3. Gently pull the body of the outer plug away from the node. As the body of the plug slides back, it will release from the socket and you can fully withdraw the whole plug.

IMPORTANT: Please read and adhere to the electrical safety information given within the Safety information booklet provided with this product. In particular, do not use an unearthed power socket or extension cable.

Note: The unit and the power adapter generate heat when in operation and will become warm to the touch. Do not enclose them or place them in locations where air cannot circulate to cool the equipment. Do not operate the equipment in ambient temperatures exceeding 40 degrees Centigrade. Do not place the products in contact with equipment whose surface temperature exceeds 40 degrees Centigrade.
**TX/RX high speed links**
ALIF2100 units can be either connected directly to each other or via a high speed (up to 1GbE) network. Links can be made:
- Using the in-built CATx ports on ALIF2102 models (see below),
- Using additional CATx connections within the SFP ports (see next page),
- Using the SFP ports with optional fiber (FCoE) modules (see next page).

**Teaming**
ALIF2100 units are ready to automatically invoke teaming whenever the CATx and SFP (with either CATx or fiber modules installed) ports are both used to link transmitters and receivers. Teaming potentially doubles the available bandwidth for video intensive applications and also provides redundancy in case one link is lost.

---

**To link using the in-built CATx port (ALIF2102 models only)**
1. Insert a suitable CATx cable into the RJ45 port on the front panel of the TX unit.
2. Connect the other end(s) of the CATx cable(s) to either a network switch or...

---

**Optional SFP module types**
- SFP-CATX-RJ45 for use with CAT5e (and above) cable.
- SFP-SM-LC modules require OS1 or OS2 single mode fiber.
- SFP-MM-LC modules require OM1, OM2, OM3 or OM4 multi-mode fiber.

See Appendix E for further details about SFP modules and cable lengths.
To install additional CATx modules
1 Insert the appropriate optional SFP module (SFP-CATX-RJ45) into socket 2* located on the front panel of the TX unit...

* And/or socket 1 on ALIF2122 / 2124 models.

...and the rear panel of the RX unit:

2 Make your CATx connection(s) between the SFP module and either the other ALIF2100 unit or a suitable network switch.

To link ALIF2100 units via fiber modules
1 Insert the appropriate optional SFP module (SFP-MM-LC or SFP-SM-LC) into socket 2* located on the front panel of the TX unit...

* And/or socket 1 on ALIF2122 / 2124 models.

...and the rear panel of the RX unit:

2 Make your fiber connection(s) between the SFP module and either the other ALIF2100 unit or a suitable fiber network switch.

3 Close the latch over the link connectors to lock them into place.
**RX video displays**

The RX unit supports either a single video connection at up to 2560x1600@60Hz or two connections, each up to 1920x1200@60Hz.

*Note: If required, DP++ to HDMI or DP++ to DVI passive adapters can be used on an ALIF2100 RX to allow a HDMI or DVI monitor to be connected instead of a DisplayPort monitor.*

**To connect video displays**

1. Connect the lead from the primary video display to the DisplayPort socket marked ‘1’ on the RX unit rear panel:

2. If required, connect the lead from the second video display to the DisplayPort socket marked ‘2’ on the RX unit rear panel.
RX audio devices
The RX unit can support headphones via its front panel jack socket. On the rear panel a line out jack socket can be used to drive powered speakers. A USB link must be made between the TX unit and the host computer for audio to operate.

To connect headphones and/or headsets
1. Connect your chosen audio device to the 3.5mm socket labeled on the front panel. Please see below for a compatibility list.

Headphone, headset and microphone support
The combined jack socket can accommodate any standard stereo headphones; it can also support headsets which conform to the CTIA/AHJ standard. The lesser-used OMTP standard is not directly supported as its microphone and ground connections are swapped. If used, the audio may be distorted and/or the mic will not operate. Suitable OMTP to CTIA/AHJ converters are available.

Supported devices
All standard headphones and some headsets are directly supported, others require a suitable converter. It can be difficult to distinguish different headset standards, however, some (but not all) CTIA/AHJ devices use white dividers on their jack plugs.

Supported
- Stereo headphones - Yes
- Mono microphone – Supported when used with an adapter
- CTIA/AHJ-compliant headset with mic - Yes
- CTIA/AHJ-compliant adapter with mic and headphones plugged in - Yes

Not supported
- OMTP-compliant headset with mic – Not supported directly
- OMTP-compliant adapter with headset plugged in – Not supported directly
RX USB devices

The ALIF RX unit has two USB ports on the front panel to which peripherals may be connected.

To connect more than two peripherals, a USB hub may be used. The total current that may be drawn from the USB ports is 1.2A, which should be sufficient for a keyboard, mouse (no more than 100mA each) and any two other devices (500mA maximum each). If more power for USB devices is required, use a powered USB hub.

To connect USB devices

1. Connect the lead from the device(s) to either of the two USB sockets on the front panel of the RX unit...

...and/or either of the two USB sockets on the rear panel.

RS232 serial support

To support RS232 serial connections, use third-party USB-to-serial adapters on both the TX and RX units.
**RX power in**
Each unit is supplied with a power adapter and country-specific power cord. The supplied power adapter uses a locking-type plug to help prevent accidental disconnection; please follow the instructions shown on the right when disconnecting a power adapter.

**To connect the power adapter**
1. Attach the output plug of the supplied power adapter to the power input socket on the left side of the rear panel. As you insert the plug, pull back slightly on the outer body to assist the locking mechanism until the plug is fully inserted.

2. Insert the IEC connector of the supplied country-specific power cord to the socket of the power adapter.

3. Connect the power cord to a nearby mains supply socket.

**To disconnect the power adapter**
1. Isolate the power adapter from the mains supply.
2. Grasp the outer body of the power adapter plug where it connects with the node.
3. Gently pull the body of the outer plug away from the node. As the body of the plug slides back, it will release from the socket and you can fully withdraw the whole plug.

**IMPORTANT:** Please read and adhere to the electrical safety information given within the Safety information booklet provided with this product. In particular, do not use an unearthed power socket or extension cable.

**Note:** The unit and the power adapter generate heat when in operation and will become warm to the touch. Do not enclose them or place them in locations where air cannot circulate to cool the equipment. Do not operate the equipment in ambient temperatures exceeding 40 degrees Centigrade. Do not place the products in contact with equipment whose surface temperature exceeds 40 degrees Centigrade.
ALIF2100 CONFIGURATION VIA WEB PAGES

Each ALIF2100 unit hosts its own internal set of web pages which contain all configuration details and settings (see also Start of Life, shown right). You will need to use a computer connected to the same network as each ALIF2100 unit to access the web pages. Additionally, on the console attached to the ALIF2100 RX unit, you can access its configuration details via the On Screen Display (OSD) by pressing CTRL + ALT + C (or by tapping the icon on the touchscreen) - see page 27.

To manually configure ALIF2100 units via their web pages

Run a web browser on your computer and enter the IP address of the required ALIF2100 unit:

The default addresses (if using port 1) are:
- **TX:** https://169.254.1.33
- **RX:** https://169.254.1.32

The default addresses (if using port 2) are:
- **TX:** https://169.254.1.43
- **RX:** https://169.254.1.42

The opening page should be displayed:

For explanations of the options within each page, please see Appendix A.

---

Start of Life: AIM or Point to Point configuration

To streamline initial configuration processes, all ALIF2100 units employ a Start of Life (SoL) procedure when they are in an unconfigured state; either because they are new or because they have undergone a factory reset.

When an unconfigured ALIF2100 unit boots, its SoL procedure will guide it to automatically determine which of two modes it should adopt:

- **AIM mode** - place itself into the control of a specific AIM server on the network, whereupon the ALIF2100 will be assigned suitable configuration details to fit within the network of similar units.
- **Mini Matrix (P2P) mode** - place itself into Mini Matrix (Point to Point) mode to allow manual configuration of links with other ALIF units.

The SoL procedure follows this basic logic flow to determine the correct mode:

---

*Note: If an AIM server is present on the network then the modules don’t have to be within SoL procedure for it to be placed under AIM control.
Start of Life configuration (continued)

PERFORMING A MANUAL FACTORY RESET
A factory reset returns ALIF2100 unit to its default configuration.

To perform a manual factory reset
1. Power on the ALIF2100 unit.
2. Use a long narrow implement (e.g. a straightened-out paper clip) to press-and-hold the recessed reset button on the front panel for roughly ten seconds, until the status indicator turns **blue** (Note: alternating red/green indications will occur during the ten second period while the button is still pressed).
3. Release the reset switch. The indicator will change to **red** for a short while (less than ten seconds) and then back to **blue** while ALIF2100 unit performs the reset and should then change to an alternative color, usually **orange** initially, signifying that the operation is complete.

Note: If you are performing a factory reset and intend to disconnect the power immediately after the reset, you must wait at least 30 seconds after you have released the reset button for it to complete the process.

Once the mode has been set to AIM control, an ALIF2100 will remain operating that way until it undergoes a factory reset. If set to P2P mode, an ALIF2100 will remain thus until it undergoes a factory reset or is discovered by an AIM server.

Note: When the modules enter Mini Matrix mode, you can cancel auto-SoL at any point by pressing Ctrl-Alt-C.
PLACING THE DEVICE INTO RECOVERY MODE

Recovery mode may allow an ALIF2100 unit to be diagnosed or upgraded in the event of the main mode being non-operational.

To boot the device into recovery mode

1. Power on the ALIF2100 unit.
2. Use a long narrow implement (e.g. a straightened-out paper clip) to press-and-hold the recessed reset button on the front panel (for less than ten seconds) until the status indicator starts alternating red/green. Note: A solid blue indication will occur after the ten second period.
3. Release the reset switch. The indicator will change to red for a short while (less than ten seconds) and then alternating red/green signifying that the device is in recovery mode. Note: If the indicator turns blue, then a factory reset has been performed instead, the device will not be in recovery mode and the operation will need to be attempted again.
### CONFIGURING DUAL TOUCHSCREENS

When a single touchscreen is used with an ALIF RX, it should operate correctly as soon as the USB link is made between the screen and the ALIF RX. However, if two touchscreens are installed it may be necessary to instruct the ALIF RX which screen to correctly attribute to each USB input.

**To attribute dual touchscreens**

1. Access the Configuration pages on the ALIF RX - see page 27.
2. Click the Ports entry from the list of pages on the left side.
3. Click the USB page icon to display the following:

   ![USB Port Mapping and Reservations](image)

   4. In the USB Port Mapping and Reservations section, match the primary touchscreen to the port number (1-4) that its USB cable is connected to.
5. Repeat step 4 for the secondary touchscreen.
6. Click the Apply button and exit from the configuration pages.
CREATING AN UNMANAGED MATRIX

Although ALIF units are most often organised and managed by a central AIM server, it is possible to create small networks of ALIF units, most often in matrix arrangements, i.e. multiple TX and RX units which can freely cross-connect.

This method of connection works well for small numbers of TX and RX units, but will become more difficult to manage as more units are attached. The maximum number of TX sources that can be made available to any RX is sixteen.

To create an unmanaged matrix
1. Connect ALIF2100 TX and RX units (with their various hosts and peripherals) to a suitable switch, as described in the Installation section - see page 10.
   
   Note: ALIF4000 modules can also be mixed within the same matrix.
   
   Note: If any device was previously managed by AIM, then it will need to be given a factory reset before continuing with this procedure. There must not be an AIM connected on the matrix network otherwise, when such devices undergo a factory reset, they will automatically revert to AIM control.
   
   You now need to perform the following procedure on each ALIF RX in turn:
2. Access the Configuration pages - see page 27.
3. Click the Transmitters option from the list on the left side. This page will list all of the available TX units which are not under AIM control. See page 38.
4. Click the Presets option from the list on the left side. Use this page to add each TX unit to the list of presets for the RX that you are editing. See page 33.

To use the matrix
- On each RX, use the OSD to access the required TX units in the usual manner. See page 27.
CREATING AND EDITING PRESETS

Presets allow you to create shortcuts from any ALIF receivers to any available ALIF transmitters. These are particularly useful when using an ALIF installation that is not under AIM control.

To access the Preset configuration page
1. On the console keyboard attached to the RX unit, access the OSD by pressing **CTRL + ALT + C** or tap the icon on the touchscreen.
2. The Preset Selection page will be displayed:

   ![Preset Selection Page](image)

   Note: The number on the left corresponds to the hotkey sequence that will connect to that channel, eg, press Ctrl-Alt-4 to connect to the 4th preset.
3. Click/tap the icon in the top right corner.
4. Choose the Presets option from the list on the left side of the screen. This page will show the same list of presets, but with options to add or edit entries:

![Presets Page](image)

To remove a preset
1. Access the Preset configuration page as discussed above.
2. In the Actions column, click the icon for the entry that you wish to remove.

To add a preset
1. Access the Preset configuration page as discussed above.
2. Click the icon on the right side of a vacant preset entry to display the configuration page:

![Add Preset Page](image)

3. Enter a name and description for the new preset.
4. You can now choose how to configure your new preset - Auto or Custom:
   - **Auto** - Click the Auto Configure Preset drop down and choose the ALIF transmitter that you wish to connect with. All of the supported default connections will be configured (on a 1-to-1 basis) between the receiver and chosen transmitter. Click the Apply button.
   - **Custom** - Configure individual connections (useful when unusual cross connections are required).
     1. Click the icon on the right side to add a new connection entry.
     2. Check that the correct module (ALIF2100T/ALIF4000T) is shown in the TX Device column. Click and change this entry, if required.
     3. In the Type column, click the Select option and choose the type of connection: Video, Audio, USB or Serial.
     4. Click the RX Port drop down and choose the port that you wish the current RX port to connect with. If only one option is available it will be auto-selected.
     5. Repeat steps 1 to 5 for each of the required ports.
     6. Click the Apply button.

To edit a preset
1. Access the Preset configuration page as discussed left.
2. In the Actions column, click the icon for the preset entry you wish to edit. An editable list of connections will be shown, together with their status representations:

![Edit Preset Page](image)

3. Make your changes as required and then click the Apply button to save.

To re-order presets
1. Access the Preset configuration page as discussed left.
2. Click and drag a preset to the required position within the list.

For more information about the options and status indications, see page 33.
In operation, many ALIF2100 installations require no intervention once configured. The TX and RX units take care of all connection control behind the scenes so that you can continue to work unhindered.

**INDICATORS**
The front and rear panels of each ALIF2100 unit feature an indicator capable of producing numerous color and flash patterns to provide a useful guide to operation. The dual indicators provide the same color and flash patterns.

**Indicator color and flash patterns**
The front and rear panel indicators use varying color and flashing patterns to signal key status:

- **Off**  
  No power.

- **Green**  
  All services present as compared to the configuration required.

- **Amber**  
  Running but video, USB or network link missing (or not connected to another ALIF unit).

- **Red**  
  Booting before processor loaded or failed.

- **Red rapid flash**  
  A critical error has been detected that is preventing the device from being used (a malfunction message will also be displayed within the OSD.)

- **Blue**  
  Factory reset mode active.

- **Red/green flash**  
  Booting into factory recovery mode.

- **Green/blue flash**  
  Upgrade mode active.

- **Fast green flash**  
  Identify mode active.
USING THE ON SCREEN DISPLAY

The OSD provides a quick and easy way to access ALIF transmitters as well as configuration details.

To access the OSD

1. On the console of your ALIF2100 RX unit, either:
   - Press **CTRL + ALT + C** on the keyboard, or
   - Tap the icon on the touchscreen.

2. The Preset Selection page will be displayed:

<table>
<thead>
<tr>
<th>Preset Name</th>
<th>Primary Server</th>
<th>Secondary Server</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Server B</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. On the preset page, either:
   - Click/tap a preset entry to connect with the required ALIF TX, or
   - Click/tap the icon to enter the first Configuration page:

To use the OSD keyboard (when using a touchscreen)

1. Access the OSD as discussed left.
2. Tap the icon in the top right corner:
3. The OSD keyboard will be displayed to assist you when entering text and numerics:

   ![OSD Keyboard](image)

To hide the OSD keyboard

1. Tap the icon in the top right corner.

To exit the OSD

1. Either press the Esc key or tap the icon in the top right corner.

For explanations of the options within each page, please see Appendix A.

*To move the icon on your touchscreen, tap and hold it until it changes color and then drag it to the best position.*
PORT STATUS POPUPS

<table>
<thead>
<tr>
<th>Video connection(s)</th>
<th>Audio connection(s)</th>
<th>USB</th>
<th>Serial</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Network connection(s)" /></td>
<td><img src="image2" alt="Connected display(s)" /></td>
<td><img src="image3" alt="Operational" /></td>
<td><img src="image4" alt="Not operational" /></td>
</tr>
<tr>
<td><img src="image5" alt="Operational" /></td>
<td><img src="image6" alt="Not operational" /></td>
<td><img src="image7" alt="Not in use" /></td>
<td><img src="image8" alt="Port disabled" /></td>
</tr>
</tbody>
</table>

These useful status indicators will be displayed in the top left corner (or elsewhere according to UI Settings) of the primary console display:
- Whenever the OSD is in use,
- If any issues occur with one or more ports (when the OSD is not in use).

The status of each port will be shown as follows:
This chapter contains a variety of information, including the following:

- Getting assistance - see right
- **Appendix A** - Configuration pages
- **Appendix B** - Support for analog and digital audio
- **Appendix C** - Tips for success when networking ALIF units
- **Appendix D** - Troubleshooting
- **Appendix E** - Glossary
- **Appendix F** - Fiber/copper modules and cables
- **Appendix G** - Using the optional ALIF2100 rack shelves
- **Appendix H** - Open source licenses

---

**GETTING ASSISTANCE**

If you are still experiencing problems after checking the information contained within this guide, then please refer to the Support section of our website:

[www.adder.com](http://www.adder.com)
APPENDIX A - Configuration pages

This section covers the web page configuration for the ALIF2100 units:

- RX - General Information
- RX - UI Settings
- RX - Presets
- RX - Users
- RX - Ports
- RX - Network
- RX - Diagnostics and Statistics
- RX - System
- TX - General Information
- TX - UI Settings
- TX - Users
- TX - Ports
- TX - Network
- TX - Diagnostics and Statistics
- TX - System

To use the OSD keyboard (when using a touch screen)
1. Access the OSD as discussed on page 27.
2. Tap the icon in the top right corner of the screen.
3. The OSD keyboard will be displayed to assist you when entering text and numerics:

To hide the OSD keyboard
1. Tap the icon in the top right corner.

To exit the OSD
1. Either press the Esc key or tap the icon in the top right corner.
RX - General Information

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the General link.

OR
1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: https://169.254.1.32 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.42. Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the General link.

General Information

Type - States whether the device is a transmitter (TX) or a receiver (RX).
Name - Name details that you can alter to distinguish this unit from all others. Not shown when operating under AIM server control.
Description - Allows you to optionally add a description of the device. Useful when many ALIF units are being used. Not shown when operating under AIM server control.
Location - Allows you to optionally add a description of the device’s location. Useful when many ALIF units are being used. Not shown when operating under AIM server control.
Current Software Version - Displays the version number of the currently installed (and active) internal software.
Serial Number - Displays the fixed serial number of the device.
Board Revision - Displays the revision number of the device’s main circuit board.

Unit Type - Used for Adder technical support purposes, this entry shows a code depicting the type of the main circuit board.
Software Compatible ID - Used for Adder technical support purposes, this entry shows the software compatible ID of the main circuit board.
Model - Displays the model number of the device.
Date and Time - Displays the current date and time used by the device when this page was last loaded (select refresh icon to update).
Uptime - Shows the time period for which the device has currently being running since the last time this page was loaded (select refresh icon to update).
Identify Device - When clicked, this button will cause the indicator on the front panel of the device to flash to assist with identification when multiple units are installed in the same area. A popup dialog will also be displayed on screen showing all relevant identification details. Click the Cancel button to stop the identification process or click the OK button to close the popup (and then click the Identify Device button when you’re ready to cancel this operation).
RX - UI Settings

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the UI Settings link.
OR
1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: https://169.254.1.32 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.42 Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the UI Settings link.

UI Settings
OSD Notification Position (plus Timeout) - Determines the location and persistence of notifications issued on users' screens.
OSD Banner Position (plus Timeout) - Determines the location and persistence of banners (a banner is a popup showing the current preset/channel name) displayed on users' screens.
OSD Timeout - Determines the persistence of the OSD if no interaction has taken place.
LED brightness - Determines the brightness of the front and rear panel LED indicators.
The following entries are also displayed when the unit is not under AIM control:
Language - Determines the language used for all text labels within the configuration pages.
Keyboard Layout - Determines the appropriate keyboard layout for use with the configuration pages.

Touch Show OSD - (When touch screens are used) Determines whether the Show OSD icon is displayed continually, not at all or automatically.
Touch Show Icon Size - (When touch screens are used) Determines the size of the Show OSD icon. Options range from Small to Very Large.
Mouse Show OSD - Determines the mouse button press combination that should be used to call the OSD.
Hotkey Modifiers - Determines the special modifier keys that will be used to form the basis of all the hotkey functions listed below.
Show OSD... Last Preset - These entries determine the hotkey letters required (together with the modifier keys selected above) to enact various presets and modes. Not shown when operating under AIM server control.

* These entries are all visible but are not configurable under AIM control.
**RX - Presets**

**To get here**
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing **CTRL + ALT + C** or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the Presets link.
4. Either add a new preset (click +) or click 🎁 to edit an existing one.

**OR**
1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: [https://169.254.1.32](https://169.254.1.32) (this is the default address when using port 1). If you are using SFP port 2, then the default address will be [https://169.254.1.42](https://169.254.1.42). Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Presets link.
5. Either add a new preset (click +) or click 🎁 to edit an existing one.

---

**Preset Information**
This page lists the details and connection status for the current channel/prest which the receiver is using. Under AIM control this lists the connection details for the channel that the RX is currently connected to. Each row details one type of connection which has been made. It lists the output port on the RX and the source port from the TX which it is connected to, as well as the name of the device it is connected to.

Click this icon in the Actions column to remove a particular row of connections from the list.
Click this icon to manually set the password for the specified device so that it has the necessary permission to access the appropriate channel on the selected transmitter. In most connections, the access passwords for all the peripherals will be set collectively during the initial linking between the receiver and transmitter. The links given here provide an alternative method as backup.
Click this icon to add a new connection to the list.

**Auto Configure Preset** - Select to automatically create a new set of connection presets from the selected TX.

**Analog and digital audio**
ALIF2100 units support both analog and digital audio connections from the host PC. Although originating from possibly the same audio source, these two audio types are switched completely separately and cannot be mixed. In the connections table, the two types are represented thus:

- **Analog** audio ([1] or [2]) at RX only connects to ([1] or [2]) at TX.
- **Digital** audio ([1] or [2]) at RX only connects to ([1] or [2]) at TX.

For more details, please see [Support for analog and digital audio](#).

---

**Status**
The following icons may be shown within the Status column:

- ![✔️](image) The connection is fully operational.
- ![❓](image) A connection has not been established.
- ![ свобода](image) The control protocol version is incompatible/unsupported between the peer and this device.
- ![ свобода](image) The control protocol security settings are incompatible/unsupported between the peer and this device.
- ![ свобода](image) The connection failed the authorisation stage (most likely a bad password).
- ![ свободна](image) The connection is established but there is no input signal being received from the peer device.
- ![ свободна](image) The connection has an invalid or unsupported input source signal peer device (audio and video connections only), or there is insufficient network bandwidth to support the requested data for this connection.
- ![ свободна](image) The encoding of the source data at the peer has stopped (due to an error or fault).
- ![ свободна](image) There is no output device available on the port for this connection (eg. no monitor connected).
- ![ свободна](image) There is no data currently being received by the device.
- ![ свободна](image) The video data for the connection produces an output signal that is out of range for the capabilities of this device, or the appliance connected to this device, or the device is currently out of resources to process the video data for this connection.
- ![ свободна](image) The audio data for the connection produces an output signal that is out of range for the capabilities of this device, or the appliance connected to this device, or the device is currently out of resources to process the audio data for this connection.
- ![ свободна](image) The decoding of the data at this device has stopped (due to an error or fault).
RX - Users

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1 On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2 Click the users icon in the top right corner.
3 If necessary, click the Users link.

OR
1 Connect a computer to the same network as the RX unit.
2 Run a web browser and enter the IP address of the RX unit: https://169.254.1.32 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.42 Note: These default addresses can be changed.
3 Click the users icon in the top right corner.
4 If necessary, click the Users link.

User accounts
This page allows you to change the password for the admin user.

Click the icon to display the following dialog:

Enter and confirm the current and new admin password and click OK.
RX - Ports

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the Ports link.

OR
1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: https://169.254.1.32 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.42. Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Ports link.

Video Ports
This page provides basic information about the two video ports located on the RX unit.
- **Enabled** - Confirms whether each video port is enabled or disabled.
- **Connected** - Confirms whether functioning video displays are connected to the two video ports.

Video EDID Details - Click the Details button to show a popup for the connected video display. EDID details listed include: Manufacturer, model, serial number, manufacture date, EDID version as well as supported (and preferred) EDID modes, maximum bits per color, encodings, colorimetry and dynamic range masterings supported by the monitor. Note: EDID modes that are supported by the monitor but not by the device will be greyed out. In cases where a resolution reported by the video display is supported, but at a lower frame rate than the display calls for, such entries will be shown in italics.

Compatibility Check - **WARNING:** Disabling this option can result in damage to display monitors in certain circumstances. When ticked this option confirms video compatibility between the source and display device, (such as the video display’s maximum resolution, bpc, etc.) and prevents signals being sent that the video display cannot support. When unticked, signals will always be sent regardless of video display’s declared capabilities. If you untick the option, the following warning will be displayed:

Frame Rate Switching - Determines the strategy to use for the frame rate when switching resolutions. Similar in function to the Match Frame Rate setting on AIM servers:
- **Force 60** - The frame rate is always forced to be 60Hz unless the Compatibility check option is on and the monitor does not indicate it supports 60Hz.
- **Retain** - When switching to the same resolution with a potentially different frame rate, it will retain the current frame.
- **Auto** - The frame rate always changes to match the mode it is connected to.

Audio Ports
This page provides basic information about the analog and digital audio ports located on the RX unit.
- **Enabled** - Confirms whether the audio ports are enabled or disabled.
- **Connected** - Confirms whether devices are connected to respective ports.

Gain - (Analog audio only) Determines the microphone amplification level:
- **None** - no device connected on this port.
- **Mic** - standard gain for normal microphone input devices.
- **Mic boost** - 20dB boost to volume for microphone input devices.

Audio EDID Details - Click the Details button to show a popup listing the audio capabilities of the device connected to that video port. Unsupported formats will be greyed out.

Compatibility Check - If unticked, audio will be output regardless of the attached device’s capabilities, however, if ticked the RX will not output audio on this port if it is not compatible with the attached device’s audio capabilities. For example, if an attached device supports 2 channel stereo but the incoming stream is 6 channels, turning this off may allow L & R audio output to work - if the attached device can cope, but other channels will be lost (i.e., there is no down-mix support).

USB Ports
This page provides basic information about the USB ports numbered 1 to 4 inclusive, located on the RX unit.
- **Type** - Identifies the type of USB ports. All are listed as Emulated.
- **Enabled** - Confirms whether the USB ports are enabled or disabled.
- **HID Only** - When ticked, all ports are limited to supporting Human Interface Devices only, such as keyboards and mice.
- **Disable Mass Storage** - When ticked, this option prevents the use of USB mass storage devices on the receiver unit. This could be useful in situations where smart card readers need to be used for security purposes but the use of USB drives need to be prevented.
- **Security** - Controls whether USB data is encrypted. On forces always on, Off forces always off and Prefer off will be off unless the TX requests it.
RX - Ports (continued)

USB Port Mapping and Reservations - This section is useful when multiple touchscreens are in use and allows you to match each USB port input to the correct touchscreen.

Connected Devices - This section lists all connected devices with manufacturer and model details where reported. Click the Details button against each device to view further information, such as the Device Type, Protocol Version, Speed and Max Power Consumption.

Serial Port
This page provides basic information about the serial option port located on the RX unit.

Port - Indicates that an optional USB-to-serial converter may be connected to ports 1 - 4 of the receiver (a similar device needs to also be connected to the AUX port on the transmitter).

Enabled - Confirms whether the serial port is enabled or disabled. Disabling the serial port (or excluding it from the preset connection list) allows an attached USB-serial adapter to instead be used over the USB connection to the TX, rather than the explicit serial connection.
RX - Network

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the Network link.
OR
1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: https://169.254.1.32 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.42. Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Network link.

**Port Settings**
This page provides numerous network details for each of the installed ports on the RX unit.

**Socket** - Details each operational network socket and what connection speeds they have established. Socket 2 is determined by the SFP modules plugged into it.

**MAC Address** - Displays the unique, fixed hardware identification number for each port.

**Link Up** - Indicates whether the link state of this network interface is up. This should be the case if the device is connected to a functioning network.

**IP Address** - This shows the IP address in use, which can be obtained via DHCP, a static IP or a link local (zero-config).

**Netmask** - The netmask of this network interface. The device can function in a network zero-config state which does not require the setting of a static netmask.

**Gateway** - The gateway address of this network interface. The device can function in a network zero-config state which does not require the setting of a static gateway.

**Static IP Address** - When the ‘DHCP enabled’ option (below) is unchecked, click on ‘Edit’ to enter/edit a static IP Address, Netmask and Gateway for the unit.

**DHCP Enabled** - When ticked, the corresponding port will derive its IP Address, Netmask and Gateway details from the DHCP server listed in the field below.

**DHCP Server Address** - Indicates the server that provided the DHCP details.

**Routing Table** - Click on ‘Details’ to show the routing table entries corresponding to this network interface. In it are the destination address, gateway and netmask for the routes to particular network destinations.

**Dynamic DNS Servers** - List of DNS server addresses obtained via DHCP.

**Static DNS Servers** - Lists DNS server addresses that have been manually configured.

**NTP Enabled** - When ticked, the unit will derive its time and date information from a suitable NTP server.

**NTP Key ID** - The ID of the key used for secure NTP.

**NTP Key Value** - The value of the key used for secure NTP as a hexadecimal string.

**Dynamic NTP Servers** - Lists NTP server addresses obtained via DHCP.

**Static NTP Servers** - Lists NTP server addresses that have been manually configured.

**AIM Enabled** - Indicates whether server management is enabled for this device.

**Dynamic AIM Servers** - Lists AIM server addresses obtained via DHCP.

**Static AIM Servers** - Lists management server addresses that have been manually configured.

**Network Information**
**Default Domain** - Reserved for future use.

**Independent Networks** - When ticked, the ALIF2100 receiver will treat its two main network ports as independent routes to the transmitter(s) and not attempt to find secondary cross connections, which may not be possible due to the network topology. This setting will have no effect when ALIF2100 receivers link with ALIF2100 or ALIF4000 transmitters due to their use of auto discovery. However, when an ALIF2100 receiver links with other dual port ALIF transmitters (such as an ALIF2002T), enabling this option can prevent unnecessary delays due to the time taken looking for routes that are effectively network dead ends.

**Route of Last Resort** - In a multi-interface device such as this, the interface which is ticked will be used as the default whenever it is unclear which interface should be used for network traffic.
**RX - Transmitters**

**To get here**
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing "CTRL + ALT + C" or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the Transmitters link.

**OR**
1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: `https://169.254.1.32` (this is the default address when using port 1). If you are using SFP port 2, then the default address will be `https://169.254.1.42` Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Transmitters link.

**Transmitters**
This page lists the available transmitters on the network which aren’t under AIM control - Note: Older ALIF1xxxT and ALIF20xxT units are generally not discoverable using this process, however, if the Start of Life process was able to connect point-to-point to an ALIF20xx then it will have created a ‘static’ device entry and thus it will appear on this screen. However, the cog and light bulb icons will not function for the entry.

In the Actions column you can perform the following functions for each listed transmitter:

- Click to view the configuration page of the TX. When clicked, you will be directed to the General page for the chosen TX. See page 41.
- Click to flash the front panel indicators on the transmitter to assist with identification.
- [When viewing TX pages] Click the X button in the top right corner to return to the RX pages.
RX - Diagnostics and Statistics

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the Diagnostics link.

OR
1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: https://169.254.1.32 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.42. Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Diagnostics link.

Log Settings
This page provides numerous key diagnostic log settings.

Capture diagnostics to download - Request generation of a diagnostics dump file. This will then be downloaded by the host computer's browser, this is an encrypted diagnostics file which can be used by technical support to diagnose and fix an issue. If using the local OSD, then this will show ‘Capture diagnostics to USB’ and will download the same file onto a USB memory stick inserted into USB ports 1-4. Note: When in point to point mode, you will need to plug in a USB flash drive and capture the logs to it.

Remote Support - When using the Adder remote server, this option determines which port will be used. Multiple options are offered in case one or more ports are blocked by your firewall.

Logging Severity Level - Defines the level of messages that will be logged (according to RFC5424). Level 5 (Notice: normal but significant condition) is the default setting; ALIF2100 supports levels 1 to 7. Choosing levels 6 (Informational) or 7 (Debug) will cause larger numbers of lesser events to also be logged, with a potential impact to overall performance. These levels should only be used if working with the support team to diagnose a specific issue.

Remote Logging Enabled - Tick to send log files to the chosen Remote Logging Address.

Remote Logging Address - Enter a valid IP address for a syslog server on the local network where status logs can be sent.

Log File - If viewing this page using a browser: Click to download the log file to the host computer’s browser. If viewing this page via the OSD, the log will be shown as a scrollable list.

Ping Test - Allows you to conduct a ping test to any selected address or device.

Perform IGMP Test - Allows you to conduct an IGMP test on connected devices, selectable from the drop-down list.

Basic Graph
This page shows a real time graph with the following entries:

- Received and Transmitted Bit Rates - the values of these correspond to the bandwidth axis on the left.
- Frame Rate - for both heads. Values are labeled when they change and correspond to the axis on the right.
- Codec - for both heads. These represent the compression used: 1 is better than 4.
- Dropped Packets - for both heads. Values are labeled when they change and correspond to the axis on the right.

Note: Use the Frame Rate and Dropped Packets tick box options to determine which is displayed at any given time.

Network Statistics
This page allows you to view current communication statistics and also to create graphs in real time.

Capture and Graph Statistics - When ticked, the page will create a real time graph plotting Received Bytes alongside Received Packets. After Capture and Graph Statistics is enabled, the Show Legend checkbox will show all other items that can be included on the plot. Click an item to tick and include it.

Video Port Status and Statistics
This page provides wide ranging information for support purposes.

Audio Port Status and Statistics
This page provides wide ranging information for support purposes.

USB Port Status and Statistics
Not yet implemented.
 RX - System

**To get here**
You can access this page in two ways, however, the first method is not available if the module is under AIM control:

1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. If necessary, click the System link.

**OR**

1. Connect a computer to the same network as the RX unit.
2. Run a web browser and enter the IP address of the RX unit: https://169.254.1.32 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.42. Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the System link.

**Software and System Operations**
This page contains various indications and options related to the internal software of the unit.

*Note: The highlighted (and colored) entry is the version of software currently running.*

- **Preferred Software Version** - The software version the device will boot into upon a reboot.
- **Recovery Software Version** - The software version the device will boot into if placed into recovery mode.
- **Alternate Software Version** - The other (backup) version of software the device has available.
- **Reboot Device** - Click the Reboot button to Reboot the device.
- **Restore Default Settings** - Click the Restore button to restore the device to factory default settings.
- **Switch Software Versions** - Click to switch to the listed ‘Alternate Software Version’.
- **Upgrade Device** - If viewing this page using a browser: Allows you to upgrade the firmware either from a trusted URL or from a locally stored file. Use the field to define the source and then click the Upgrade button.
### TX - General Information

#### To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:

1. On the console keyboard attached to the RX unit, access the OSD by pressing `CTRL + ALT + C` or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the `icon` in the top right corner.
3. Click the `Transmitters` option and then click the `icon` for the required transmitter.
4. If necessary, click the `General` link.

**OR**

1. Connect a computer to the same network as the TX unit: [https://169.254.1.33](https://169.254.1.33) (this is the default address when using port 1). If you are using SFP port 2, then the default address will be [https://169.254.1.43](https://169.254.1.43).
2. Note: These default addresses can be changed.
3. Click the `icon` in the top right corner.
4. If necessary, click the `General` link.

#### General Information

**Type** - States whether the device is a transmitter (TX) or a receiver (RX).

**Name** - Name details that you can alter to distinguish this unit from all others. Not shown when operating under AIM server control.

**Description** - Allows you to optionally add a description of the device. Useful when many ALIF units are being used. Not shown when operating under AIM server control.

**Location** - Allows you to optionally add a description of the device’s location. Useful when many ALIF units are being used. Not shown when operating under AIM server control.

**Current Software Version** - Displays the version number of the currently installed and running internal software (unit can have two different software versions installed at once).

**Serial Number** - Displays the fixed serial number of the device.

**Board Revision** - Displays the revision number of the device's main circuit board.

**Unit Type** - Used for Adder technical support purposes, this entry shows a code depicting the type of the main circuit board.

**Software Compatible ID** - Used for Adder technical support purposes, this entry shows the software compatible ID of the main circuit board.

<table>
<thead>
<tr>
<th>Model</th>
<th>Displays the model number of the device.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date and Time</td>
<td>Displays the current date and time used by the device when this page was last loaded (select refresh icon to update).</td>
</tr>
<tr>
<td>Uptime</td>
<td>Shows the time period for which the device has currently been running since the last time this page was loaded (select refresh icon to update).</td>
</tr>
<tr>
<td>Identify Device</td>
<td>When clicked, this button will cause the indicator on the front panel of the device to flash to assist with identification when multiple units are installed in the same area. A popup dialog will also be displayed on screen showing all relevant identification details. Click the Cancel button to stop the identification process or click the OK button to close the popup (and then click the Identify Device button when you're ready to cancel this operation).</td>
</tr>
<tr>
<td>Access Password</td>
<td>Sets the password that a RX device must provide in order to connect (video, audio, etc) to the TX</td>
</tr>
<tr>
<td>Insecure Connections</td>
<td>Controls whether the TX will accept insecure connections from RX devices. Insecure connections are those from older ALIF products where the security credentials are not implemented. Initially, the TX will default to 'auto' which allows it to decide the setting based on the type of device that first connects to it. Once a device has connected, the setting will be changed to either 'Allowed' or 'Disallowed'.</td>
</tr>
</tbody>
</table>
**TX - UI Settings**

**To get here**
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing **CTRL + ALT + C** or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. Click the **Transmitters** option and then click the icon for the required transmitter.
4. If necessary, click the **UI Settings** link.

**OR**
1. Connect a computer to the same network as the TX unit.
2. Run a web browser and enter the IP address of the TX unit:
   - **https://169.254.1.33** (this is the default address when using port 1). If you are using SFP port 2, then the default address will be **https://169.254.1.43**. Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the **UI Settings** link.

**UI Settings**
- **LED brightness** - Determines the brightness of the front and rear panel LED indicators.
- **Language** - Determines the language used for all text labels within the configuration pages.
TX - Users

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1 On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2 Click the icon in the top right corner.
3 Click the Transmitters option and then click the icon for the required transmitter.
4 If necessary, click the Users link.

OR
1 Connect a computer to the same network as the TX unit.
2 Run a web browser and enter the IP address of the TX unit: https://169.254.1.33 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.43 Note: These default addresses can be changed.
3 Click the icon in the top right corner.
4 If necessary, click the Users link.

User accounts
This page allows you to change the password for the admin user.

Click the icon to display the following dialog:

```
Change User Password
Enter and confirm the new user password for this device.
Password
Confirm Password
Cancel OK
```

Enter and confirm the current and new admin password and click OK.
**TX - Ports**

**To get here**
You can access this page in two ways, however, the first method is not available if the module is under AIM control:

1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. Click the Transmitters option and then click the icon for the required transmitter.
4. If necessary, click the Ports link.

**OR**
1. Connect a computer to the same network as the TX unit.
2. Run a web browser and enter the IP address of the TX unit: [https://169.254.1.33](https://169.254.1.33) (this is the default address when using port 1). If you are using SFP port 2, then the default address will be [https://169.254.1.43](https://169.254.1.43) Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Ports link.

**Video Ports**
This page provides basic information about the two video ports located on the TX unit.

**Enabled** - Confirms whether each video port is enabled or disabled.

**Connected** - Confirms whether functioning host video drivers are connected to the two video ports.

**EDID Source** - Lists the EDID mode currently being output on the two video connectors.

**Attached Monitor Receiver** - If the ‘Attached monitor’ option has been selected as the ‘EDID Source’, then this displays the name of the RX device that supplied the EDID currently being used.

**EDID Optimization** - When ticked, and if the EDID source option is set to ‘Attached monitor’, upon connecting with a new receiver, the transmitter will compare the preferred video mode of the new monitor with the current video output from the host PC. Only if they differ will the transmitter present the new monitor’s EDID to the host PC. This option speeds up switching as the host PC’s graphics card does not have to go through a hotplug detect routine each time a new receiver is connected. If this setting is unticked, the transmitter will always present a new EDID to the host PC.

**Background Refresh (frames)** - The system will send all changing video as soon as it changes. In addition, it is possible to send unchanging video in the background, to overcome problems of lost network traffic. This control will configure how often a whole frame of video will be sent alongside changing video. In situations of frequently changing video, or high reliability networks, this value can be set to a higher number, or even set to disabled.

**Compression Type** - Allows you to select the compression method to best suit the nature of the video sources. Settings are: Pixel Perfect, Adaptive, Smoothest Video or Advanced (which allows you to set the maximum and minimum compression levels).

**Frame Skipping** - Frame Skipping involves ‘missing out’ video frames between those captured by the TX unit. For video sources that update only infrequently or for those that update very frequently but where high fidelity is not required, frame skipping is a good strategy for reducing the overall bandwidth consumed by the system. Range: 0 to 100%.

**Magic Eye** - When ticked, this feature increases performance and reduces network traffic if ALIF units are used with host computers that have dithered video output. It also improves performance if the video source is noisy.

**Max Bits per Pixel** - These settings are fixed at 24bpp (ie, 8bpc) for this model.

**Multicast Addresses** - This section lists all video multicast IP addresses that have been configured. Setting the field to a blank (empty string) value will cause the system to automatically generate a default multicast address.

---

Background Refresh (frames) - The system will send all changing video as soon as it changes. In addition, it is possible to send unchanging video in the background, to overcome problems of lost network traffic. This control will configure how often a whole frame of video will be sent alongside changing video. In situations of frequently changing video, or high reliability networks, this value can be set to a higher number, or even set to disabled.

**Compression Type** - Allows you to select the compression method to best suit the nature of the video sources. Settings are: Pixel Perfect, Adaptive, Smoothest Video or Advanced (which allows you to set the maximum and minimum compression levels).

**Frame Skipping** - Frame Skipping involves ‘missing out’ video frames between those captured by the TX unit. For video sources that update only infrequently or for those that update very frequently but where high fidelity is not required, frame skipping is a good strategy for reducing the overall bandwidth consumed by the system. Range: 0 to 100%.

**Magic Eye** - When ticked, this feature increases performance and reduces network traffic if ALIF units are used with host computers that have dithered video output. It also improves performance if the video source is noisy.

**Max Bits per Pixel** - These settings are fixed at 24bpp (ie, 8bpc) for this model.

**Multicast Addresses** - This section lists all video multicast IP addresses that have been configured. Setting the field to a blank (empty string) value will cause the system to automatically generate a default multicast address.
TX - Ports (continued)

Audio Ports
This page provides basic information about the audio ports located on the TX unit.

Enabled - Confirms whether the audio ports are enabled or disabled.
Connected - Confirms whether devices are connected to respective ports.
EDID Source - Determines which audio EDID should be used:
Attached Monitor - use the audio capabilities reported by the monitor.
None - remove audio support from the EDID presented by the TX to the connected PC.
2-Channel - apply a generic stereo audio EDID.
Attached Monitor Receiver - If the EDID source option is set to 'Attached monitor', then this displays the name of the RX device that supplied the EDID currently being used.
EDID Optimization - When ticked, and if the EDID source option is set to 'Attached monitor', upon connecting with a new receiver, the transmitter will compare the preferred audio mode of the new monitor with the current audio output from the host PC. Only if they differ will the transmitter present the new monitor's EDID to the host PC. This option speeds up switching as the host PC's graphics card does not have to go through a hotplug detect routine each time a new receiver is connected. If this setting is unticked, the transmitter will always present a new EDID to the host PC.
Multicast Addresses - This section lists all audio multicast IP addresses that have been configured. Setting the field to a blank (empty string) value will cause the system to automatically generate a default multicast address.

USB Ports
This page provides basic information about the USB ports located on the TX unit.

Type - Identifies the type of the USB port.
Enabled - Confirms whether the USB ports are enabled or disabled.
Connected - Confirms whether valid devices are connected to either USB port.
Note: As both USB ports share the same physical port, it is not possible to detect whether a specific port has a device connected.
Rate Limit - This option allows you to place an upper limit on the bandwidth that can be consumed by the transparent USB subsystem as a whole. This can be useful in situations where the overall network bandwidth is quite low and high resolution video performance is being impacted by USB operation; particularly during large file transfers to or from a mass storage device inserted into the ALIF receiver. Using this option you can choose an appropriate USB bandwidth rate limit between 1 and 480Mbps.
Reserved Ports - Allows USB ports to be optionally reserved for use with particular devices. Once reserved, certain rules can be applied to them via the AdderLink Infinity Manager (AIM) application.
Present Boot Keyboard - When ticked, the TX unit will report a virtual dummy boot keyboard to the attached PC to ensure that a keyboard is always reported when the PC boots up. The dummy boot keyboard uses one of the 13 USB endpoints, therefore if all 13 endpoints are required elsewhere for USB devices (or a KVM switch only supports two HID devices) then it can be disabled by deselecting this option.
Max Hub Size - Using this option you can select whether the TX unit should report itself as a 13 or a 7 port USB hub. Some USB hosts are only able to support 7 port USB hubs. If this option is set to 7, then only 7 USB devices are supported by the PC.
Security - Controls whether USB data is encrypted. On forces always on, Off forces always off and Prefer off will be off unless the RX requests it.

Serial Port
This page provides basic information about the serial option port located available on the AUX USB port located on the front panel of the TX unit.

Enabled - Confirms whether the serial port is enabled or disabled.
Speed - The 'baud rate' of the serial device.
Data Bits - The number of data bits to be used (5, 6, 7, or 8).
Stop Bits - The number of stop bits to be used (1 or 2).
Parity - The parity checking to be used (none, odd or even).

For more information about how video and audio EDID data are derived, see Support for analog and digital audio.
TX - Network

Port Settings
This page provides numerous network details for each of the installed ports on the TX unit.

Socket - Details each operational network socket. Sockets 3 and 4 are determined by the SFP modules plugged into them.

MAC Address - Displays the unique, fixed hardware identification number for each port.

Link Up - Indicates whether the link state of this network interface is up. This should be the case if the device is connected to a functioning network.

IP Address - This shows the IP address in use, which can be obtained via DHCP, a static IP or a link local (zero-config).

Netmask - The netmask of this network interface. The device can function in a network zero-config state which does not require the setting of a static netmask.

Gateway - The gateway address of this network interface. The device can function in a network zero-config state which does not require the setting of a static gateway.

Static IP Address - When the ‘DHCP enabled’ option (below) is unchecked, click on 'Edit' to enter/edit a static IP Address, Netmask and Gateway for the unit.

DHCP Enabled - When ticked, the corresponding port will derive its IP Address, Netmask and Gateway details from the DHCP server listed in the field below.

DHCP Server Address - Indicates the server that provided the DHCP details.

Bandwidth Limit - This option can be used to set an upper limit (between 10 and 1000 Mbps aka 1Gbps) to the amount of the network bandwidth used on the physical interface. This could be useful if multiple devices share a common network link upstream; without a limit, the link could become overloaded and drop data.

Routing Table - Click on ‘Details’ to show the routing table entries corresponding to this network interface. In it are the destination address, gateway and netmask for the routes to particular network destinations.

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:

1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. Click the Transmitters option and then click the icon for the required transmitter.
4. If necessary, click the Network link.

OR
1. Connect a computer to the same network as the TX unit.
2. Run a web browser and enter the IP address of the TX unit:
   https://169.254.1.33 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.43 Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Network link.

Network Settings
Default Domain - Reserved for future use.
Route of Last Resort - In a multi-interface device such as this, the interface which is ticked will be used as the default whenever it is unclear which interface should be used for network traffic.
Dynamic DNS Servers - List of DNS server addresses obtained via DHCP.
Static DNS Servers - Lists DNS server addresses that have been manually configured.
NTP Enabled - When ticked, the unit will derive its time and date information from a suitable NTP server.
NTP Key ID - The ID of the key used for secure NTP.
NTP Key Value - The value of the key used for secure NTP as a hexadecimal string.
Dynamic NTP Servers - Lists NTP server addresses obtained via DHCP.
Static NTP Servers - Lists NTP server addresses that have been manually configured.
AIM Enabled - Indicates whether server management is enabled for this device.
Dynamic AIM Servers - Lists AIM server addresses obtained via DHCP.
Static AIM Servers - Lists management server addresses that have been manually configured.
Log Settings
This page provides numerous key diagnostic log settings.

Capture diagnostics to download - (Only shown when viewing this page using a PC browser). Request generation of a diagnostics dump file. This will then be downloaded by the host computer’s browser, this is an encrypted diagnostics file which can be used by technical support to diagnose and fix an issue.

Remote Support - When using the Adder remote server, this option determines which port will be used. Multiple options are offered in case one or more ports are blocked by your firewall. When the Enable button is clicked, it will indicate the password to be used.

Logging Severity Level - Defines the level of messages that will be logged (according to RFC5424). Level 5 (Notice: normal but significant condition) is the default setting; ALIF2100 supports levels 1 to 7. Choosing levels 6 (Informational) or 7 (Debug) will cause larger numbers of lesser events to also be logged, with a potential impact to overall performance. These levels should only be used if working with the support team to diagnose a specific issue.

Remote Logging Enabled - Tick to send log files to the chosen Remote Logging Address.

Remote Logging Address - Enter a valid IP address for a syslog server on the local network where status logs can be sent.

Log File - If viewing this page using a browser: Click to download the log file to the host computer’s browser. If viewing this page via the OSD, the log will be shown as a scrollable list.

Ping Test - Provides a quick and easy way to check the link status to an ALIF RX. You can specify either an IP address or choose the device from a list. Click the Start button to begin; a summary of the results will be displayed.

TX - Diagnostics and Statistics

To get here
You can access this page in two ways, however, the first method is not available if the module is under AIM control:
1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. Click the Transmitters option and then click the icon for the required transmitter.
4. If necessary, click the Diagnostics link.

OR
1. Connect a computer to the same network as the TX unit.
2. Run a web browser and enter the IP address of the TX unit: https://169.254.1.33 (this is the default address when using port 1). If you are using SFP port 2, then the default address will be https://169.254.1.43 Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the Diagnostics link.

Network Statistics
This page allows you to view current communication statistics and also to create graphs in real time.

Capture and Graph Statistics - When ticked, the page will create a real time graph plotting Received Bytes alongside Received Packets. After Capture and Graph Statistics is enabled, the Show Legend checkbox will show all other items that can be included on the plot. Click an item to tick and include it.

Video Port Status and Statistics
This page provides wide ranging information for support purposes.

Audio Port Status and Statistics
This page provides wide ranging information for support purposes.

USB Port Status and Statistics
Not yet implemented.
Software and System Operations
This page contains various indications and options related to the internal software of the unit.

Note: The highlighted (and colored) entry is the version of software currently running.

**Preferred Software Version** - The software version the device will boot into upon a reboot.

**Recovery Software Version** - The software version the device will boot into if placed into recovery mode.

**Alternate Software Version** - The other (backup) version of software the device has available.

**Reboot Device** - Click the Reboot button to Reboot the device.

**Restore Default Settings** - Click the Restore button to restore the device to factory default settings.

**Switch Software Versions** - Click to switch to the listed ‘Alternative Software Version’.

**Upgrade Device** - Allows you to upgrade the firmware either from a trusted URL or from a locally stored file. Use the field to define the source and then click the Upgrade button.

---

**To get here**
You can access this page in two ways, however, the first method is not available if the module is under APM control:

1. On the console keyboard attached to the RX unit, access the OSD by pressing CTRL + ALT + C or tap the touchscreen icon. The Preset Selection page will be displayed.
2. Click the icon in the top right corner.
3. Click the Transmitters option and then click the icon for the required transmitter.
4. If necessary, click the System link.

**OR**
1. Connect a computer to the same network as the TX unit.
2. Run a web browser and enter the IP address of the TX unit: [https://169.254.1.33](https://169.254.1.33) (this is the default address when using port 1). If you are using SFP port 2, then the default address will be [https://169.254.1.43](https://169.254.1.43) Note: These default addresses can be changed.
3. Click the icon in the top right corner.
4. If necessary, click the System link.
APPENDIX B - Support for analog and digital audio

The ALIF2100 range benefits from multiple audio signal streams:

- **Uni-directional analog audio** - from the host PC's jack socket,
- **Uni-directional digital audio** - via the video connection,
- **Bi-directional digital audio** - via the USB connection (converted to/from analog).

Even though the analog and digital outputs from a particular host PC might be carrying signals that originated from the same audio source, they are handled separately throughout the ALIF system and can never be mixed.

For digital audio derived from the video connection, the host PC needs to know details of the required signal to send out, e.g. 16 or 24-bit, 48, 88.2 or 96kHz sample rate, etc., so a valid definition of the requirement must be sent to the host PC. This is done as an audio sub-set of the EDID definition that is used to declare the video display capabilities/requirements.

In the diagram below the display and speaker installation send their video and digital audio portions of the EDID (Extended Display Identification Data) definition via the ALIF2100 receiver and transmitter to the host PC:

In response, the host PC begins sending video and audio signals that are appropriate for the receiving peripherals:

In the above case, the video and digital audio from the host PC are both sent to the same receiver. However, the flexibility of the ALIF system is such that peripherals and hosts can be mixed as required. For instance, the video feed could be sent to one receiver, while the digital audio is used by a set of speakers on a different receiver:

Notes:

- ALIF2100 units support only two channel stereo audio and the transmitters will not encode digital audio from a PC with more than 2 channels.
- An ALIF2100 receiver can accept multi-channel audio (up to 8 channels) from an alternative ALIF source, such as an ALIF4000 transmitter, however, it will only decode and output the standard left and right channels.

This presents an issue for the host PC and its ALIF2100 transmitter as they must now respond to separate EDID definitions from the video display on one receiver (which will probably also have its own EDID audio sub-set) and the EDID definition from the digital audio device on the other receiver:

To solve potential conflicts, the ALIF2100 transmitter uses a set of rules to determine how it mixes different EDID definitions. Firstly, for any connected video or digital audio devices, the ALIF system can consider each one using any of three selectable states:

- **Attached** - ALIF will interrogate the attached video/audio device to ascertain its exact capabilities/requirements.
- **Fixed** - ALIF will use a fixed definition (e.g. 1920x1080p60 and 2-channel audio) to represent the video/audio device(s).
- **None** - No representation will be made for the device.

The above states are then combined by the ALIF2100 transmitter, as connections are made to the different devices, using the following rules:

<table>
<thead>
<tr>
<th>Video EDID</th>
<th>Audio EDID</th>
<th>Action (taken by the TX as it feeds info to the PC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fixed</td>
<td>Fixed</td>
<td>Merge the video and audio EDID definitions.</td>
</tr>
<tr>
<td>Fixed/Attached</td>
<td>None</td>
<td>Send video EDID definition only.</td>
</tr>
<tr>
<td>Attached</td>
<td>Attached</td>
<td>Use whichever EDID definition is available first.</td>
</tr>
<tr>
<td>Attached/Fixed</td>
<td>Fixed/Attached</td>
<td>Wait for the Attached device to declare and then use its data to modify those of the Fixed device. Note: The video EDID retains precedence for setting general items, such as serial no., manufacturer, etc.</td>
</tr>
</tbody>
</table>

Note: The analog audio is switched entirely separately to the digital audio feed.

**Analog and digital audio specifications**

- **Analog audio**: Line in/out - 2 channel 16bit 48KHz 1V RMS in / 1V RMS out
- **Digital audio** (DisplayPort or HDMI):
  - Up to 2 audio channels,
  - Five choices of sampling frequencies: 32, 44.1, 48, 88.2 or 96kHz.
  - Three choices of bit depth, using LPCM Linear Pulse Code Modulation: 16, 20 or 24bit,
APPENDIX C - Tips for success when networking ALIF units

ALIF units use multiple strategies to minimize the amount of data that they send across networks. However, data overheads can be quite high, particularly when very high resolution video is being transferred, so it is important to take steps to maximize network efficiency and help minimize data output. The tips given in this section have been proven to produce very beneficial results.

Summary of steps
- Choose the right kind of switch.
- Create an efficient network layout.
- Configure the switches and devices correctly.

Choosing the right switch
Layer 2 switches are what bind all of the hosts together in the subnet. However, they are all not created equally, so choose carefully. In particular look for the following:
- 10Gigabit ports,
- Support for IGMP v2 (or v3) snooping,
- Support for jumbo frames up to 9216-byte size,
- High bandwidth connections between switches, preferably Fiber Channel.
- Look for switches that perform their most onerous tasks (e.g. IGMP snooping) using multiple dedicated processors (ASICS).
- Ensure the maximum number of concurrent ‘snoopable groups’ the switch can handle meets or exceeds the number of ALIF transmitters that will be used to create multicast groups.
- Check the throughput of the switch: Full duplex, 10Gbps up- and down- stream speeds per port.
- Use the same switch make and model throughout a single subnet.
- You also need a Layer 3 switch. Ensure that it can operate efficiently as an IGMP Querier.

Creating an efficient network layout
Network layout is vital. The use of IGMP snooping also introduces certain constraints, so take heed:
- Keep it flat. Use a basic line-cascade structure rather than a pyramid or tree arrangement.
- Keep the distances between the switches as short as possible.
- Ensure sufficient bandwidth between switches to eliminate bottlenecks.
- Where the AIM server is used to administer multiple ALIF transceivers, ensure the AIM server and all ALIF units reside in the same subnet.
- Do not use VGA to DisplayPort converters, instead replace VGA video cards in older systems with suitable DisplayPort replacements. Converters cause ALIF TX units to massively increase data output.
- Wherever possible, create a private network.

The recommended layout
The layout shown below has been found to provide the most efficient network layout for rapid throughput when using IGMP snooping:

- Use no more than two cascade levels.
- Ensure high bandwidth between the two L2 switches and very high bandwidth between the top L2 and the L3. Typically 10GB and 20GB, respectively for 48 port L2 switches.

continued
Configuring the switches and devices

The layout is vital but so too is the configuration:

- Enable **IGMP Snooping** on all L2 switches.
- Ensure that **IGMP Fast-Leave** is enabled on all switches with ALIF units connected directly to them.
- Enable the L3 switch as an **IGMP Querier**.
- Enable **Spanning Tree Protocol (STP)** on all switches and importantly also enable portfast (only) on all switch ports that have ALIF units connected.
- If any hosts will use any video resolutions using 2048 horizontal pixels (e.g. 2048 x 1152, 2048 x 2048), ensure that **Jumbo Frames** are enabled on all switches.
- Choose an appropriate forwarding mode on all switches. Use **Cut-through** if available, otherwise **Store and forward**.
- Optimize the settings on the ALIF transmitters:
  - If moving video images are being shown frequently, then leave Frame Skipping at a low percentage and instead reduce the Peak bandwidth limiter.
  - Where screens are quite static, try increasing the Background Refresh interval and/or increasing the Frame skipping percentage setting.
- Make changes to the ALIF transmitters one at a time, in small steps, and view typical video images so that you can attribute positive or negative results to the appropriate control.
- Ensure that all ALIF units are fully updated to the latest firmware version (at least v2.1).
APPENDIX D - Troubleshooting

Problem: The video image of the ALIF receiver shows horizontal lines across the screen.

This issue is known as Blinding because the resulting video image looks as though you’re viewing it through a venetian blind.

When video is transmitted by ALIF units, the various lines of each screen are divided up and transmitted as separate data packets. If the reception of those packets is disturbed, then blinding is caused. The lines are displayed in place of the missing video data packets.

There are several possible causes for the loss of data packets:

• Incorrect switch configuration. The problem could be caused by multicast flooding, which causes unnecessary network traffic. This is what IGMP snooping is designed to combat, however, there can be numerous causes of the flooding.

• Speed/memory bandwidth issues within one or more switches. The speed and capabilities of different switch models varies greatly. If a switch cannot maintain pace with the quantity of data being sent through it, then it will inevitably start dropping packets.

• One or more ALIF units may be outputting Jumbo frames due to the video resolution (2048 horizontal pixels) being used. If Jumbo frames are output by an ALIF unit, but the network switches have not been configured to use jumbo frames, the switches will attempt to break the large packets down into standard packets. This process introduces a certain latency and could be a cause for dropped packets.

• One or more ALIF units may be using an old firmware version. Firmware versions prior to v2.1 exhibited an issue with the timing of IGMP join and leave commands that caused multicast flooding in certain configurations.

Remedies:

• Ensure that IGMP snooping is enabled on all switches within the subnet.

• Where each ALIF unit is connected as the sole device on a port connection to a switch, enable IGMP Fast-Leave (aka Immediate Leave) to reduce unnecessary processing on each switch.

• Check the video resolution(s) being fed into the ALIF transmitters. If resolutions using 2048 horizontal pixels are unavoidable then ensure that Jumbo frames are enabled on all switches.

• Check the forwarding mode on the switches. If Store and forward is being used, try selecting Cut-through as this mode causes reduced latency on lesser switch designs.

• Ensure that one device within the subnet is correctly configured as an IGMP Querier, usually a layer 3 switch or multicast router.

• Try adjusting the transmitter settings on each ALIF to make the output data stream as efficient as possible. See ALIF transmitter video settings for details.

continued
Problem: The audio output of the ALIF receiver sounds like a scratched record.
This issue is called Audio crackle and is a symptom of the same problem that produces blinding (see previous page). The issue is related to missing data packets.

Remedies:
As per blinding discussed previously.

Problem: AIM cannot locate working ALIF units.
There are a few possible causes:

- The ALIF units must be reset back to their zero config IP addresses for AIM discovery. If you have a working network of ALIF’s without AIM and then add AIM to the network, AIM will not discover the ALIFs until they are reset to the zero config IP addresses.

- This could be caused by Layer 2 Cisco switches that have Spanning Tree Protocol (STP) enabled but do not also have portfast enabled on the ports to which ALIF units are connected. Without portfast enabled, ALIF units will all be assigned the same zero config IP address at reboot and AIM will only acquire them one at a time on a random basis.

  You can easily tell whether portfast is enabled on a switch that is running STP: When you plug the link cable from a working ALIF unit into the switch port, check how long it takes for the port indicator to change from orange to green. If it takes roughly one second, portfast is on; if it takes roughly thirty seconds then portfast is disabled.

Remedies:

- Ensure that the ALIF units and the AIM server are located within the same subnet because AIM cannot cross subnet boundaries.
- Manually reset the ALIF units to their zero config IP addresses.
- Enable portfast on all switch ports that have ALIF units attached to them or try temporarily disabling STP on the switches while AIM is attempting to locate ALIF units.
Multicasting involves the delivery of identical data to multiple receivers simultaneously without the need to maintain individual links. When multicast data packets enter a subnet, the natural reaction of the switches that bind all the hosts together within the subnet, is to spread the multicast data to all of their ports. This is referred to as Multicast flooding and means that the hosts (or at least their network interfaces) are required to process plenty of data that they didn’t request. IGMP offers a partial solution.

The Internet Group Management Protocol (IGMP) is designed to prevent multicast flooding by allowing Layer 3 switches to check whether host computers within their care are interested in receiving particular multicast transmissions. They can then direct multicast data only to those points that require it and can shut off a multicast stream if the subnet has no recipients.

There are currently three IGMP versions: 1, 2, and 3, with each version building upon the capabilities of the previous one:

- IGMP v1 allows host computers to opt into a multicast transmission using a Join Group message, it is then incumbent on the router to discover when they no longer wish to receive; this is achieved by polling them (see IGMP Querier below) until they no longer respond.
- IGMP v2 includes the means for hosts to opt out as well as in, using a Leave Group message.
- IGMP v3 encompasses the abilities of versions 1 and 2 but also adds the ability for hosts to specify particular sources of multicast data.

ADDERLink™ INFINITY units make use of IGMP v2 when performing multicasts to ensure that no unnecessary congestion is caused.

**IGMP Snooping**

The IGMP messages are effective but only operate at Layer 2 - intended for routers to determine whether multicast data should enter a subnet. A relatively recent development has taken place within the switches that glue together all of the hosts within each subnet: IGMP Snooping. IGMP snooping means these layer 2 devices now have the ability to take a peek at the IGMP messages. As a result, the switches can then determine exactly which of their own hosts have requested to receive a multicast – and only pass on multicast data to those hosts.

**IGMP Querier**

When IGMP is used, each subnet requires one Layer 3 switch to act as a Querier. In this lead role, the switch periodically sends IGMP Query messages and in response all hosts report which multicast streams they wish to receive. The Querier device and all snooping Layer 2 switches then update their lists accordingly (the lists are also updated when Join Group and Leave Group (IGMPv2) messages are received).

**IGMP Fast-Leave (aka Immediate Leave)**

When a device/host no longer wishes to receive a multicast transmission, it can issue an IGMP Leave Group message as mentioned above. This causes the switch to issue an IGMP Group-Specific Query message on the port (that the Leave Group was received on) to check no other receivers exist on that connection that wish to remain a part of the multicast. This process has a cost in terms of switch processor activity and time.

Where ALIF units are connected directly to the switch (with no other devices on the same port) then enabling IGMP Fast-Leave mode means that switches can immediately remove receivers without going through a full checking procedure. Where multiple units are regularly joining and leaving multicasts, this can speed up performance considerably.

**Jumbo frames (Jumbo packets)**

Since its commercial introduction in 1980, the Ethernet standard has been successfully extended and adapted to keep pace with the ever improving capabilities of computer systems. The achievable data rates, for instance, have risen in ten-fold leaps from the original 10Mbit/s to a current maximum of 100Gbit/s.

While data speeds have increased massively, the standard defining the number of bytes (known as the Payload) placed into each data packet has remained resolutely stuck at its original level of 1500 bytes. This standard was set during the original speed era (10Mbits/s) and offered the best compromise at that speed between the time taken to process each packet and the time required to resend faulty packets due to transmission errors.

But now networks are much faster and files/data streams are much larger; so time for a change? Unfortunately, a wholesale change to the packet size is not straightforward as it is a fundamental standard and changing it would mean a loss of backward compatibility with older systems.

Larger payload options have been around for a while, however, they have often been vendor specific and at present they remain outside the official standard. There is, however, increased consensus on an optional ‘Jumbo’ payload size of 9000 bytes and this is fully supported by the ADDERLink™ INFINITY (ALIF) units.

Jumbo frames (or Jumbo packets) offer advantages for ALIF units when transmitting certain high resolution video signals across a network. This is because the increased data in each packet reduces the number of packets that need to be transferred and dealt with - thus reducing latency times.

The main problem is that for jumbo frames to be possible on a network, all of the devices on the network must support them.
Spanning Tree Protocol (STP)

In order to build a robust network, it is necessary to include certain levels of redundancy within the interconnections between switches. This will help to ensure that a failure of one link does not lead to a complete failure of the whole network.

The danger of multiple links is that data packets, especially multicast packets, become involved in continual loops as neighbouring switches use the duplicated links to send and resend them to each other.

To prevent such bridging loops from occurring, the Spanning Tree Protocol (STP), operating at layer 2, is used within each switch. STP encourages all switches to communicate and learn about each other. It prevents bridging loops by blocking newly discovered links until it can discover the nature of the link: is it a new host or a new switch?

The problem with this is that the discovery process can take up to 50 seconds before the block is lifted, causing problematic timeouts.

The answer to this issue is to enable the portfast variable for all host links on a switch. This will cause any new problematic timeouts.

Layer 2 and Layer 3: The OSI model

When discussing network switches, the terms Layer 2 and Layer 3 are very often used. These refer to parts of the Open System Interconnection (OSI) model, a standardized way to categorize the necessary functions of any standard network.

There are seven layers in the OSI model and these define the steps needed to get the data created by you (imagine that you are Layer 8) reliably down onto the transmission medium (the cable, optical fiber, radio wave, etc.) that carries the data to another user; to complete the picture, consider the transmission medium is Layer 0. In general, think of the functions carried out by the layers at the top as being complex, becoming less complex as you go lower down.

As your data travel down from you towards the transmission medium (the cable), they are successively encapsulated at each layer within a new wrapper (along with a few instructions), ready for transport. Once transmission has been made to the intended destination, the reverse occurs: Each wrapper is stripped away and the instructions examined until finally only the original data are left.

So why are Layer 2 and Layer 3 of particular importance when discussing ADDERLink™ INFINITY! Because the successful transmission of data relies upon fast and reliable passage through network switches – and most of these operate at either Layer 2 or Layer 3.

The job of any network switch is to receive each incoming network packet, strip away only the first few wrappers to discover the intended destination then rewrap the packet and send it in the correct direction.

continued
In simplified terms, the wrapper that is added at Layer 2 (by the sending system) includes the physical address of the intended recipient system, i.e. the unique MAC address (for example, 09:f8:33:d7:66:12) that is assigned to every networking device at manufacture. Deciphering recipients at this level is more straightforward than at Layer 3, where the address of the recipient is represented by a logical IP address (e.g. 192.168.0.10) and requires greater knowledge of the surrounding network structure. Due to their more complex circuitry, Layer 3 switches are more expensive than Layer 2 switches of a similar build quality and are used more sparingly within installations.
## APPENDIX F - Fiber/copper modules and cables

To suit your installation layout, fiber and copper modules are available for the ALIF2100 units to support various fiber optic and CATx cables. The specifications for all are summarized in this table:

<table>
<thead>
<tr>
<th>Name</th>
<th>Fiber size</th>
<th>Type</th>
<th>Coding</th>
<th>Distance at 1 Gbps</th>
<th>Adder part number for SFP module</th>
</tr>

APPENDIX G - Using the optional ALIF2100 rack shelves

RMK17 rack mount for ALIF2100 TX units
1. Install the empty rack mount into your 19” rack frame and fully secure it.
2. Place compatible modules into the three bays of the rack mount so that their rear panels butt up against the small pegs located on each of the side walls.
3. Locate the supplied thumbscrews and spacers.
4. Insert the thumbscrew through the spacer; then insert into the small hole at the end of a divider (A).
5. Gently tighten the thumbscrew so that the spacer engages with the inner edges of the modules that are either side of the divider to hold them in place (B).
6. Repeat steps 4 and 5 for the other thumbscrew and spacer.
7. Place the power adapters in the rear section of the rack mount and connect them to their respective modules.
8. Make all other necessary connections to the modules.

Using a blanking plate when a single module is installed
In order to maintain suitable cooling airflow, if only two modules are installed within the rack mount, you are recommended to install an optional blanking plate: RMK17-BP
Note: The outer edge of the blanking plate needs to overlap the ears of the rack mount itself, so you need to either install the blanking plate before the tray is installed or briefly remove the mounting bolts on the blanked side (while supporting the weight of the tray) to allow the blanking plate to be put in place.

IMPORTANT: When mounting the ALIF units (and their power adapters), ensure that the vents are not obscured and that there is sufficient airflow. The operating temperature range is 0 to 40°C (0 to 104°F) and must not be exceeded.
RMK15 rack mount for ALIF2100 RX units
1 Place a compatible module into each side of the rack mount so that their rear panels butt up against the center backstop.
2 Locate the two supplied brackets.
3 Place a bracket at side of the rack mount so that they hold each unit in place (A).
4 Install the rack mount into your 19” rack frame and fully secure it using four bolts (B).
5 Place the power adapters in the rear section of the rack mount and connect them to their respective modules.
6 Make all other necessary connections to the modules.

IMPORTANT: When mounting the ALIF units (and their power adapters), ensure that the vents are not obscured and that there is sufficient airflow. The operating temperature range is 0 to 40°C (0 to 104°F) and must not be exceeded.

RMK15 and RMK17 rack mounts:
Suitable for installation in Information Technology Rooms in accordance with Article 645 of the National Electrical Code and NFPA 75.
Peut être installé dans des salles de matériel de traitement de l’information conformément à l’article 645 du National Electrical Code et à la NFPA 75.
APPENDIX H - OPEN SOURCE LICENSES

The software included in this product contains copyrighted software that is licensed under the GNU General Public License (GPL) v2. You may obtain the complete Corresponding Source Code from Adder for a period of three years after the last shipment of this product, which will be no earlier than 2028, by contacting support@adder.com or writing to:

License for Open Source Software Implementations of OCB
January 9, 2013

1 Definitions

1.1 “Licensee” means Phillip Rogaway.

1.3 “Use” means any practice of any invention claimed in the Licensed Patents.

1.4 “Software Implementation” means any practice of any invention claimed in the Licensed Patents that takes the form of software executing on a user-programmable, general-purpose computer or that takes the form of a computer-readable medium storing such software. Software Implementation does not include, for example, application-specific integrated circuits (ASICs), field-programmable gate arrays (FPGAs), embedded systems, or IP cores.

1.5 “Open Source Software” means software whose source code is published and made available for inspection and use by anyone because either (a) the source code is subject to a license that permits recipients to copy, modify, and distribute the source code without payment of fees or royalties, or (b) the source code is in the public domain, including code released for public use through a CC0 waiver. All licenses certified by the Open Source Initiative at opensource.org as of January 9, 2013, and all Creative Commons licenses identified on the creativescommons.org website as of January 9, 2013, including the Public License Fallback of the CC0 waiver, satisfy these requirements for the purposes of this license.

1.6 “Open Source Software Implementation” means a Software Implementation in which the software implicating the Licensed Patents is Open Source Software. Open Source Software Implementation does not include any Software Implementation in which the software implicating the Licensed Patents is combined, so as to form a larger program, with software that is not Open Source Software.

2 License Grant

2.1 License. Subject to your compliance with the terms of this license, including the restriction set forth in Section 2.2, Licensee hereby grants to you a perpetual, worldwide, non-exclusive, non-transferable, non-sublicenseable, no-charge, royalty-free, irrevocable license to practice any invention claimed in the Licensed Patents in any Open Source Software Implementation.

2.2 Restriction. If you or your affiliates institute patent litigation (including, but not limited to, a cross-claim or counterclaim in a lawsuit) against any entity alleging that any Use authorized by this license infringes another patent, then any rights granted to you under this license automatically terminate as of the date such litigation is filed.

3 Disclaimer

YOUR USE OF THE LICENSED PATENTS IS AT YOUR OWN RISK AND UNLESS REQUIRED BY APPLICABLE LAW LICENSEE MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE LICENSED PATENTS OR ANY PRODUCT EMBODYING ANY LICENSED PATENT EXPRESS OR IMPLIED STATUTORY OR OTHERWISE INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NONINFRINGEMENT. IN NO EVENT WILL LICENSEE BE LIABLE FOR ANY CLAIM DAMAGES OR OTHER LIABILITY WHETHER IN CONTRACT, TORT OR OTHERWISE ARISING FROM OR RELATED TO ANY USE OF THE LICENSED PATENTS INCLUDING, WITHOUT LIMITATION, DIRECT, INDIRECT, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR SPECIAL DAMAGES, EVEN IF LICENSEE HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES PRIOR TO SUCH AN OCCURRENCE.

Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice (including the next paragraph) shall be included in all copies or substantial portions of the Software.

The SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Software is furnished to do so, subject to the following conditions:...
Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice (including the next paragraph) shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
3. The names of the authors may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED "AS IS" AND WITHOUT ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE AUTHORS OR COPYRIGHT HOLDERS DISCLAIM ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

The following individuals contributed in part to the Network Time Protocol Version 4 and are acknowledged as authors of this file:

1. [1] Takao Abe <takao_abe@xurb.jp> Clock driver for JJY receivers
2. [2] Mark Andrews <mark_andrews@isc.org> Leitch atomic clock controller
3. [3] Bernd Almeier <bernd.almeier@hetz.de> hpf Electronics serial line and PCI devices
4. [4] Rajiv Bais <rbais@smail.intal.com> and [5] Clayton Kirkwood <kirkwood@striderfm.intel.com> port to Windows NT 3.3
5. [6] Michael Baronen <michael.baronen@lcc.so> GPS/PMVIMe fixers
6. [7] Karl Berry <kball@uwq.lia.edu> syslog to file option
7. [8] Greg Brackley <greg@bakcley@bkp.com> Major rewrite of WNTN part, clean up residual and initial code into separate modules.
8. [9] Marc Brest <Marc.Brest@westeo.com> Magnavox GPS clock driver
9. [10] Pietro Brooks <Felix Brooks@cf.com> MF clock driver, Trimble support
10. [11] Neilson B Bolyard <neilson@bolyard.com> update and complete broadcast and crypto features in src
11. [12] Jean-Francois Boudreau <Jean-Francois.Boudreau@imeqg.vc.qc.ca> IPv6 support
12. [13] Reg Clemens <reg@bgf.com> Oncore driver (Current maintainer)
13. [14] Steve Clift <clift@mlam.co.za> OMEGA clock driver
14. [15] Casey Creelle <casey@coast.ca> veWorks (Toronto) port and help with target configuration.
15. [16] Jan Dietrich <jv@dickt@lrc.com> Paladin reference clock driver, NT adj. residuals, integrated Greg's Winnt port.
17. [18] Torstan Duwe <duwe@danim4.informatik.uni-erlangen.de> Linux port
18. [19] Darren Ferguson <dennis@mbl.cornell.edu> foundation code for NTP Version 2 as specified in RFC 1169
19. [20] John Ho <jay@komtec.cair.co> IPv6 support and testing
20. [21] Dave Hert <dawhert@dawhert.com> General maintenance, Windows port interopulation rewrite
21. [22] Claus Hilscher <neoclock@knmum.dk> Neoclock4K clock driver
22. [23] Glenn Hilsenger <glenn@hilsenger.us> GOES clock driver
23. [24] Mike Iglesias <miglesia@uoc.edu> DCC Alpha clock
24. [25] Jim Jagalski <jim@jagalski.gsf.na.gov> AIX port
25. [26] Geoff Johnson <gtj@chadbam.ats.com> major prototyping overhaul
26. [27] Hans Lambermont <Hans.Lambermont@ul.org.inict.com> or [28] H.Lambermont@xlab.nl repurpose
27. [29] Paul-Henning Kamp <ph@FreeBSD.ORG> Oncore driver (Original author)
29. [32] Johannes Maximilian Kuehn <kuhni@u-berlin.de> rewrite sntp to comply with NTPv4 specification, sntp source
30. [33] William L. Jones <willj@ctca.com> tpx.seq.ustex.edu > RS/400 AUX modifications, HPUX modifications
31. [34] Dave Katz <dka@ccico.com> RS/6000 AUX port
32. [35] Craig Leeve <hercules@webs.ex.ac.uk> HP-UX port, Magnavox GPS clock driver
33. [36] George Lindon <lindon@cs.ubc.ca> SapOS 5.1 port
34. [37] A. A. Mamakos <louie@ni.umd.edu> MDS-based authentication
35. [38] H. Mattissen <horin@diku.dk> adaptation of foundation code for Version 3 as specified, RFC 1305
36. [39] Darin Meyer <meyer@net.org> Network I/O, Windows Port, Code Maintenance
37. [40] David L. Mills <mills@udu.edu> Version 4 foundation, precision kernel clock drivers 1, 3, 4, 6, 7, 11, 13, 18, 22, 36
38. [41] Wolfgang Mosler <mosler@gwdg.de> ipv6.de, ipv6.org, VPH port
39. [42] Jeffrey Mogul <mogul@ps.dec.com> mrtrace utility
40. [43] Tom Moore <tmoore@frenel.dyonix.com> Octe1 driver
41. [44] Kana A. Mostafa <kama@lwence.com> SCO OpenServer port
42. [45] Diedrich Muhlen <diedrich@tbox evolution.com> and [46] Dan Honstien <dan.hilts@ispac.com> CRMC MSF clock driver
43. [47] Rob Nal <ralp@nul.org> Bancom refclock and config/parse code maintenance
44. [48] Rainer Pry <Rainer.Pry@informatik.uni-erlangen.de> monitoring/snsp scripts, statistics file handling
45. [49] Dave Richards <drcs@b3.dec.com> Digital UNIX4.0 port

Fonts are (c) Bitstream (see below). Do not change these in public domain. Glyphs imported from Arev fonts are (c) Tavmjong Bah (see below).

Bitstream Vera Copyright Notice

Copyright (c) 2003 by Bitstream, Inc. All Rights Reserved. Bitstream Vera is a trademark of Bitstream, Inc.

Permission is hereby granted, free of charge, to any person obtaining a copy of the fonts accompanying this license (“Fonts”) and associated documentation files (the “Font Software”), to reproduce and distribute the modifications to the Bitstream Vera Font Software, including without limitation the rights to use, copy, merge, publish, distribute, and/or sell copies of the Font Software, and to permit persons to whom the Font Software is furnished to do so, subject to the following conditions:

The above copyright and trademark notices and this permission notice shall be included in all copies of one or more of the Font Software typefaces.

The Font Software may be modified, altered, or added to, and in particular the designs of glyphs or characters in the Fonts may be modified and additional glyphs or characters may be added to the Fonts, only if the Fonts are renamed to names not containing either the words “Tavmjong Bah” or the word “Arev”.

This License becomes null and void to the extent applicable to Fonts or Font Software that has been modified and is distributed under the “Tavmjong Bah Arev” names.

The Font Software may be sold as part of a larger software package but no copy of one or more of the Font Software typefaces may be sold by itself. THE FONT SOFTWARE IS PROVIDED “AS IS”, WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OF COPYRIGHT, PATENT, TRADEMARK, OR OTHER RIGHT. IN NO EVENT SHALL TAMJONG BAH BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, INCLUDING ANY GENERAL, SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE ARISING FROM, OUT OF THE USE OR INABILITY TO USE THE FONT SOFTWARE OR FROM OTHER DEALINGS IN THE FONT SOFTWARE.

Except as contained in this notice, the names of Bitstream, the Gnome Foundation, and Bitstream Inc., shall not be used in advertising or otherwise to promote the sale, use or other dealings in this Font Software without prior written authorization from the Gnome Foundation or Bitstream Inc., respectively. For further information, contact fonts at gnome dot org.

Arev Fonts Copyright Notice

Copyright (c) 2006 by Tavmjong Bah All Rights Reserved.

Permission is hereby granted, free of charge, to any person obtaining a copy of the fonts accompanying this license (“Fonts”) and associated documentation files (the “Font Software”), to reproduce and distribute the modifications to the Bitstream Vera Font Software, including without limitation the rights to use, copy, merge, publish, distribute, and/or sell copies of the Font Software, and to permit persons to whom the Font Software is furnished to do so, subject to the following conditions:

The above copyright and trademark notices and this permission notice shall be included in all copies of one or more of the Font Software typefaces.

The Font Software may be modified, altered, or added to, and in particular the designs of glyphs or characters in the Fonts may be modified and additional glyphs or characters may be added to the Fonts, only if the fonts are renamed to names not containing either the words “Tavmjong Bah” or the word “Arev”.

This License becomes null and void to the extent applicable to Fonts or Font Software that has been modified and is distributed under the “Tavmjong Bah Arev” names.

The Font Software may be sold as part of a larger software package but no copy of one or more of the Font Software typefaces may be sold by itself. THE FONT SOFTWARE IS PROVIDED “AS IS”, WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OF COPYRIGHT, PATENT, TRADEMARK, OR OTHER RIGHT. IN NO EVENT SHALL TAMJONG BAH BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, INCLUDING ANY GENERAL, SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE ARISING FROM, OUT OF THE USE OR INABILITY TO USE THE FONT SOFTWARE OR FROM OTHER DEALINGS IN THE FONT SOFTWARE.

Except as contained in this notice, the names of Bitstream, the Gnome Foundation, and Bitstream Inc., shall not be used in advertising or otherwise to promote the sale, use or other dealings in this Font Software without prior written authorization from the Gnome Foundation or Bitstream Inc., respectively. For further information, contact fonts at gnome dot org.

Active License

Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION AND DISTRIBUTION

1. Definitions.

License shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

Licensor shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

Legal Entity shall mean the union of the acting entity and all other entities that control, are controlled by, or under common control with that entity. For purposes of this definition, “control” means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

“You” (or “Your”) shall mean an individual or Legal Entity exercising permissions granted by this License.

Source” form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

Object” form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

Work” shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

“Derivative Works” shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces, of the Work and Derivative Works thereof.

Contribution” shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, “submitted” means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as “Not a Contribution.”

“Contributor” shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by its Contribution(s) alone or by its Contribution(s) in combination with the Work to which such Contribution(s) were submitted. You may assert your rights under this patent license in a court of competent jurisdiction independently of your license under this License.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by your Contribution(s) alone or by combination of your Contribution(s) with the Work to which such Contribution(s) were submitted. You may assert your rights under this patent license in a court of competent jurisdiction independently of your license under this License.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file, You may add Your own attribution notices as long as You do not alter the notices that the Licensor and Contributors add.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with the Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.

See the License for the specific language governing permissions and limitations under the License.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are intended to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish) without infringing the rights of other authors.

These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program", any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

2. You may modify your copy or copies of the Program or any portion of it, in the following two cases: (a) corresponding to a corresponding level of program, and (b) in a way that affects the way the program behaves in its most ordinary use.

3. You may offer to run the Program for a user on a "费" available fee basis, provided that...

4. You may distribute copies of the Program or a modification(s) under the terms of Section 1 above, provided that you accompany it with the完整COPYRIGHT NOTICE, and provide the necessary support.

5. You may see free software, we are referring to freedom, not price. Our General Public Licenses are intended to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish) without infringing the rights of other authors.

When we speak of free software, we are referring to freedom, not price.
when run, you must cause it, when started running for such interactive use in the most ordinary way to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. You may charge a fee for the physical act of transferring the program or a work based on the program, but you may not charge a fee for distribution of the program itself, either on a stand-alone basis or as a collective work or part of a larger working environment. You may not offer, or charge a fee for, the physical act of running the program on another computer, or for controlling it, or accessed from a server, unless such activity is included as part of a larger collective work. You may not copy, modify, sublicense, or distribute the program except as expressly provided for under this License and without permission of the copyright holder.

2. You may copy and distribute the program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you do also one of the following:

   a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2. (That the source code is machine-readable means that it can be run using an available off-the-shelf program); to achieve this, the source code must at least include the source code for all the ordinary use functions.

   b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under Sections 1 and 2 above, on a medium customarily used for software interchange; or, at your option, any equivalent document in a machine- readable form.

   c) Accompany it with the information you received as to the offer to distribute corresponding source code.

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, scripts used to control compilation and installation of the executable, and the scripts and any associated documentation specifying a method of looking at or continuing a run. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the object code under this Section 1.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided for under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance. If you are not required to accept this License, since you have not signed it, but this does not have any effect on your right to the hardware to accompany the executable. If you distribute the program or a work based on the Program, you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program (or any work based on it), 2. Each time you redistribute the Program (or any work based on the Program), you must accompany it automatically receive a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may accept and distribute the program under any of these restrictions, you do not excuse you from the conditions of this License. You cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, they would not even be eligible for distribution under this License, and the only way you could satisfy both it and this License would be to refrain entirely from distribution of the program.

5. As is a consequence of a court’s judgment or allegation of patent infringement or any other right to which this License would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, only the only way you could satisfy both it and this License would be to refrain entirely from distribution of the program. If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

6. The intent of this section is to make thoroughly clear what is believed to be a consequence of the rest of this License.

7. If the distribution and/or use of the Program is restricted in certain countries or regions by copyright owners due to applicable copyright law, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

8. The Free Software Foundation has published new and/or revised versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to add new features or problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and “any later version”, you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author(s) to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

1. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM “AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

2. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS
How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which anyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and the "

(\n<one line to give the program's name and a brief idea of what it does.>\nCopyright (C) \year\n\nmame of author>\n\n\nThis program is free software; you can redistribute it and/or\nmodify it under the terms of the GNU General Public License as\npublished by the Free Software Foundation; either version 2 of\nthe License, or\n(at your option) any later version.\n\nThis program is distributed in the hope that it will be useful,\nbut WITHOUT ANY WARRANTY; without even the implied warranty of\nMERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the\nGNU General Public License for more details.\n\nYou should have received a copy of the GNU General Public License\nalong with this program; if not, write to the Free Software Foundation, Inc.,\n51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.\n\nAlso add information on how to contact you by electronic and paper mail.\n\nIf the program is interactive, make it output a short notice like this\nwhen it starts in an interactive mode:\n\nGnomovision version 69. Copyright (C) year name of author\nGnomovision comes with ABSOLUTELY NO WARRANTY; for details type \n"show w".\nThis is free software, and you are welcome to redistribute it \nunder certain conditions; type \"show c\" for details.\n\nThe hypothetical commands \"show w\" and \"show c\" should show the appropriate\nparts of the General Public License. Of course, the commands you use\nmay be called something other than \"show w\" and \"show c\"; they could even be\n

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library; if necessary, have a lawyer draft it. Such a disclaimer should include a provision that says:

The Library is distributed in hope that it will be useful, but WITHOUT ANY WARRANTY; without even the IMPLIED WARRANTY OF MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. The terms of this License do not alter the general applicable law of commerce-terminating contracts from effect.

You may copy and distribute verbatim copies of this license document, but never with "科普ious" as any name that you design for its organization; to do otherwise would be ineffective.

You can also write an interactive program that uses the Library as a subroutine, provided that you do not modify or change it.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal freedom to copy, distribute and /or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this the "Lesser" General Public License because it does less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less restrictions than the ordinary General Public License. These disadvantages are offset by increased opportunities for people to use a less expensive Library.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de facto standard. To provide a way of doing this, the ordinary General Public License, being consistent with Free Software Foundation policy, does not allow linking the Library with other free programs. The Lesser Library License does allow linking in that case; we hope that this will not encourage programs作者的声誉将不会受到影响。

This modifications. All these restrictions are naturally phrased for copying and distribution—other rights remain unchanged.

This file contains no serial number. It is not copyrighted. It was created to provide a plain text representation of the Lesser GPL as it is not copyrighted and is therefore in the public domain. It is also not a derivative work of the original Lesser GPL license document. It is freely distributable.

GNU LESSER GENERAL PUBLIC LICENSE
Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2.1, hence the version number 2.1.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software—to make sure the software is free for all its users.

The Library is an example of a program that serves a larger program. The Library contains many files and libraries of its own. The copyright law requires that you commit the Library to share and change free software—to make sure the software is free for all its users.

The library, the Lesser General Public License, applies to software distributed as a complete library. It is intended to ensure that the user can run a program that uses the Library even if the program and the Library are distributed under different terms. This is unlike some other free software licenses, which are designed to ensure that the user can run a program that uses the Library only if the program is distributed under the same terms as the Library.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the user's freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a work based on the library and a work that uses the library. The former contains code derived from the library, whereas the latter must be combined with the library. However, both may be independent works.

GNUS LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License."). Each licensee is addressed as "you".

1. You may copy and distribute verbatim copies of this license document, but never with "科普ious" as any name that you design for its organization; to do otherwise would be ineffective.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
   a) The modified work must itself be a software library.
   b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
   c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
   d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

   (For example, a function in a library to compute square roots has distribution that is entirely independent of any other application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional if the application does not supply the square root function must still compute square roots.)

   These requirements apply to the modified work as a whole. If identical sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the whole. A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

   The Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter translation is included without limitation in the term "modification.")

   "Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

   Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

   I. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

   You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

   2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

   a) The modified work must itself be a software library.
   b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
   c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
   d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

   (For example, a function in a library to compute square roots has distribution that is entirely independent of any other application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional if the application does not supply the square root function must still compute square roots.)

   These requirements apply to the modified work as a whole. If identical sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the
link a "work that uses the Library" with the Library to produce a work containing portions of the uncombined form of the work under terms of your choice, provided that the terms permit modification of the work for the customer’s own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work does not display copyright notices needed for such notice, then you must accompany it with a copy of the License so that the recipient can copy the License. Most of these requirements are easily accomplished via standard publishing practices. You may provide the required notices along with the source code, or at your option, you may place a copy of the notice in the Library itself, or in any suitable alternative location.

The Library is not required to be distributed in source code form. The “work that uses the Library” means any executable that uses the Library’s facilities. For example, an executable that links with the Library is a work that uses the Library.

The strategy used to distribute the Library is important to ensure the proper protection of the Library’s source code, which will most often be distributed in object code or linked into an executable. There are two circumstances in which the terms of this License permit changes to the source code: when the Library is incorporated into a library (linking), and when the Library is included in an executable.

These changes may be implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system. It is up to the author/donor to decide if he or she is willing to distribute software through other systems and licensees need not, therefore, be consistent in this regard.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is allowed only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be in spirit to the present version, but may differ in detail to address new problems or concerns.
GNU LESSER GENERAL PUBLIC LICENSE
Version 3.29 June 2007
Copyright (C) 2007 Free Software Foundation, Inc. <https://fsf.org/>
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates thevelte of that version or of any later version published by the Free Software Foundation; we sometimes make exceptions for this. This decision will be guided by the two goals of preserving the free status of all derivates of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY
13. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO
WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE
LAW, EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT
HOLDERS AND/OR OTHER PARTIES PROVIDE THE "LIBRARY" "AS IS" WITHOUT
WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT
NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND
FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY
AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE
DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR,
OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN
WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY
AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU
FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR
CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE
THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING
RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRDPARTIES OR A
FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF
SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF
SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach it to the start of each source file to most effectively convey the exclusion of warranty; and each file that contains non COPYRIGHT notices. This code is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should also get your employer (if you work as a programmer) or your school, if you are one, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the
library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

--------------------------------------------------------------------------------

END OF TERMS AND CONDITIONS
1.1. "Contributor" means each individual or legal entity that creates, contributes to the creation of, or owns Covered Software.

1.2. "Contribution" means the combination of the Contributions of others (if any) used by a Contributor and that particular Contributor’s Contribution.

1.3. "Contributor Version" means Covered Software of a particular Contributor.

1.4. "Covered Software" means Source Code Form to which the initial Contributor has attached the notice in Exhibit A, the Executable Form of such Source Code Form, and Modifications of such Source Code Form, in each case including the notices described in Exhibit B.

1.5. "Incompatible With Secondary Licenses" means [a] that the initial Contributor has attached the notice described in Exhibit B to the Covered Software; or [b] that the Covered Software was made available under the terms of version 1.1 or earlier of the License, but not also under the terms of a Secondary License.

1.6. "Executable Form" means any form of the work other than Source Code Form.

1.7. "Larger Work" means a work that combines Covered Software with other material, in a separate file or files, that is not Covered Software.

1.8. "License" means this document.

1.9. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently, any and all of the rights conveyed by this License.

1.10. "Modifications" means any of the following:

(a) any file in Source Code Form that results from an addition to, deletion from, or modification of the contents of Covered Software; or

(b) any new file in Source Code Form that contains any Covered Software.

1.11. "Patent Claims" of a Contributor means any patent claim(s), including without limitation, method, process, and apparatus claims, in any patent Licensable by such Contributor that would be infringed, but for the grant of the License, by the making, using, selling, offering for sale, having made, import, or transfer of either its Contributions or its Contributor Version.

1.12. "Secondary License" means either the GNU General Public License, Version 2.0, the GNU Lesser General Public License, Version 3.0, or any later versions of those Licenses.

1.13. "Source Code Form" means the form of the work preferred for making modifications.

1.14. "You" (or "Your") means an individual or a legal entity exercising rights under this License, including without limitation, method, process, and apparatus claims, in any patent Licensable by You.

2. License Grants and Conditions

2.1. Grants Each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by such Contributor to use, reproduce, make available, modify, display, perform, distribute, and otherwise exploit its Contributions, either on an unmodified basis, with Modifications, or as part of a Larger Work; and

(b) under Patent Claims of such Contributor to make, use, sell, offer for sale, have made, import, and otherwise transfer either its Contributions or its Contributor Version.

2.2. Effective Date The licenses granted in Section 2.1 with respect to any Contribution become effective for each Contribution on the date the Contributor first distributes such Contribution.

3. Responsibilities

3.1. Distribution of Source Form All distribution of Covered Software in Source Code Form, including any Modifications that You create or to which You contribute, must be under the terms of this License.

3.2. Distribution of Executable Form If You distribute Covered Software in Executable Form then:

(a) such Covered Software must also be made available in Source Code Form, as described in Section 3.1; and

(b) You must inform recipients of the Executable Form how they can obtain a copy of such Source Code Form by reasonable means in a timely manner, at a charge no more than the cost of distribution to the recipient; and

(c) You may distribute such Executable Form under the terms of this License.
License, or sublicense it under different terms, provided that the license for the Executable Form does not attempt to limit or alter the recipients’ rights in the Source Code Form under this License.

3.3. Distribution of a Larger Work
You may create and distribute a Larger Work under terms of Your choice, provided that You also comply with the requirements of this License for the Covered Software. If the Larger Work is a combination of Covered Software with a work governed by one or more Secondary Licenses, and the Covered Software is not Incompatible With Secondary Licenses, this License permits You to additionally distribute such Covered Software under the terms of such Secondary License(s), so that the recipient of the Larger Work may, at their option, further distribute the Covered Software under any of these terms or such License or any Secondary License(s).

3.4. Notices
You may not remove or alter the substance of any license notices (including copyright notices, patent notices, disclaimers of warranty, or limitations of liability) contained within the Source Code Form of the Covered Software, except that You may alter any license notices to the extent required to remedy known factual inaccuracies.

3.5. Application of Additional Terms
You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Software. However, You may do so only on Your own behalf, and not on behalf of any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify every Contributor for any liability incurred by such Contributor as a result of warranty, support, indemnity or liability terms You offer. You may include additional disclaimers of warranty and limitations of liability specific to any jurisdiction.

4. Inability to Comply Due to Statute or Regulation
If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Covered Software due to statute, judicial order, or regulation then You must (a) comply with the terms of this License to the maximum extent possible, and (b) describe the limitations and the code they affect. Such description must be placed in a text file included with all distributions of the Covered Software under this License. Except to the extent prohibited by statute or regulation, such description must be sufficiently detailed for a recipient of ordinary skill to be able to understand it.

5. Termination
5.1 The rights granted under this License will terminate automatically if You fail to comply with any of its terms. However, if You become compliant, then the rights granted under this License from a particular Contributor are reinstated (a) provisionally, unless and until such Contributor explicitly and finally terminates Your grants, and (b) on an ongoing basis, if such Contributor notifies You of the non-compliance by some reasonable means prior to 60 days after You have become back in compliance. Moreover, Your grants from a particular Contributor are reinstated on an ongoing basis if such Contributor notifies You of the non-compliance by some reasonable means, this is the first time You have received notice of non-compliance with this License from such Contributor, and You become compliant prior to 30 days after Your receipt of the notice.

5.2 If You initiate litigation against any entity by asserting a patent infringement claim (excluding declaratory judgment actions, counter-claims, and cross-claims) alleging that a Contributor Version directly or indirectly infringes any patent, then the rights granted to You by any and all Contributors for the Covered Software under Section 2.1 of this License shall terminate.

5.3. In the event of termination under Sections 5.1 or 5.2 above, all end user license agreements (excluding distributors and resellers) which have been validly granted by You or Your distributors under this License prior to termination shall survive termination.

6. Disclaimers of Warranty
Covered Software is provided under this License on an “as is” basis, without warranty of any kind, either expressed, implied, or statutory, including, without limitation, warranties that the Covered Software is free of defects, merchantable, fit for a particular purpose or non-infringing. The entire risk as to the quality and performance of the Covered Software is with You.

You should not distribute Covered Software prove defective in any respect, You (not any Contributor) assume the cost of any necessary servicing, repair, or correction. This disclaimer of warranty constitutes an essential part of this License. No use of any Covered Software is authorized under this License except under this disclaimer.

7. Limitation of Liability
Under no circumstances and under no legal theory, whether tort (including negligence), contract, or otherwise, shall any Contributor or anyone who distributes Covered Software as permitted above, be liable to You for any direct, indirect, special, incidental, or consequential damages of any character including, without limitation, damages for lost profits, loss of goodwill, work stoppage, computer failure or malfunction, or any

and all other commercial damages or losses, even if such party shall have been informed of the possibility of such damages. This limitation of liability shall not apply to liability for death or personal injury resulting from such party’s negligence to the extent applicable law provides such limitation. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so this exclusion and limitation may not apply to You.

8. Litigation
Any litigation relating to this License may be brought only in the courts of a jurisdiction where the defendant maintains its principal place of business and such litigation shall be governed by laws of that jurisdiction, without reference to its conflict-of-laws provisions.

Nothing in this Section shall prevent a party’s ability to bring cross-claims or counter-claims.

9. Miscellaneous
This License represents the complete agreement concerning the subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. Any law or regulation which provides that the language of a contract shall be construed against the drafter shall not be used to construe this License against a Contributor.

10. Versions of the License
Mozilla Foundation is the license steward. Except as provided in Section

10.1. New Versions
You may distribute the Covered Software under the terms of the version of the License under which You originally received the Covered Software, or under the terms of any subsequent version published by the license steward.

10.2. Modified Versions
If you create software not governed by this License, and want to create a new license for such software, you may create and use a modified version of this License if you rename the License and remove any references to the name of the license steward (except to note that such modified license differs from this License).

10.4. Distributing Source Code Form that is Incompatible With Secondary Licenses
If You choose to distribute Source Code Form that is Incompatible With Secondary Licenses under the terms of this version of the License, the notice described in Exhibit B of this License must be attached.

Exhibit A - Source Code Form License Notice

This Source Code Form is subject to the Mozilla Public License, v. 2.0. If a copy of the MPL was not distributed with this file, You can obtain one at http://mozilla.org/MPL/2.0/.

If it is not possible or desirable to put the notice in a particular file, then You may include the notice in a location (such as a LICENSE file in a relevant directory) where a recipient would be likely to look for such a notice.

You may add additional accurate notices of copyright ownership.

Exhibit B - “Incompatible With Secondary Licenses” Notice

This Source Code Form is “Incompatible With Secondary Licenses”, as defined by the Mozilla Public License, v. 2.0.
