Note: Not compatible with thick profile or wide-framed mirrors.

Note: Allow at least 5cm clearance when installing above flat or frameless mirrors.

The description of Gesture sensing function :

ON/ OFF Function:

After it connects to AC230V, the luminaire turns ON by sweeping the hand to the left or right (within 5cm of the sensor head). When the luminaire is ON, the weak light is 3000K by default. Then, the luminaire turns OFF by sweeping the hand to the left or right. Remote Switch only available when luminaire is using weak light.

Brightness Select Function between strong and weak light:

After the luminaire turns ON (weak light), if the hand stays within 5 seconds of the sensor head (within 5cm of the sensor head), the luminaire will become strong light. When the hand leaves the sensor head, and stays within 5 seconds of the sensor head again, the luminaire will become weak light.

The description of touch function:

Colour Select Function :

After the luminaire turns ON, the default is weak light 3000K. At this time, if it touches the contactor by hand, the color temperature becomes 4000K, then touches the contactor, the color temperature becomes 5000K. (The color temperature change sequence is 3000K-4000K-5000K, constantly cycling).

Voltage Selection Function:

If the switch is turned to the left, the corresponding 110V indicator will be ON. And, the output of the power socket is 110V.

If the switch is turned to the right, the corresponding 230V indicator will be ON. And, the output of the power socket is 230V.
